Water units are typically reported in cubic feet or 100 cubic feet. A cubic foot is 7.48 gallons. 100 cubic feet is 748 gallons.

For this bill you would multiply 10 x 748 to get the use in gallons: 10 ccf x 748 gallons = 7,480 gallons.

Divide 7,480 gallons by 60 to determine the average use per day: 7,480 /60 = 124.7 gallons.

Divide by the number of people in your home for the average amount of water used per person per day.

For example, if there are 5 people in your home, you would divide 124.7 gallons/5 people = 24.9 gallons per person per day.
