MEMORANDUM

DATE: January 22, 2025

TO: Penny Sweet, Chair Board of Directors

FROM: Ray Hoffman, Chief Executive Officer

SUBJECT: Chief Executive Officer's Report

Administration, Finance, and Economics

- On December 6, 2024, the Office of the Washington State Auditor presented the results of their 2023 accountability audit to management. No findings were reported. The Accountability Audit performed by the Office of the Washington State Auditor is attached at the end of this CEO Report.
- Cascade staff completed the 2025 2026 budget book in December 2024 and applied for the Distinguished Budget Presentation Award with the Government Finance Officers Association. The budget book can be found at https://cascadewater.org/about/finance/budget/
- Cascade staff will meet virtually later this month with its outside auditor, Clark Nuber. Cascade is preparing for Clark Nuber to conduct the annual audit of Cascade's fiscal year 2024 in March. The auditors will examine Cascade's financial reports, internal controls, and compliance with policies and procedures. Once complete, the auditors will present the results of the audit at a meeting of the Finance and Management Committee. The State Auditor's Office will conduct a separate audit of Cascade later this year.
- Cascade applied for the 2024 Association of Washington Cities Employee Benefits Trust WellCity Award. Cascade has won the award since 2018. If awarded the WellCity designation, Cascade would continue to save 2% on health insurance costs. The awards should be announced by March.
- Cascade's IT consultant, TeamLogicIT and Redbot, their subconsultant, performed a penetration test on Cascade's systems in December. Cascade is going to meet with them later this month to review the results. Additionally, in December, TeamLogic moved Cascade's file server to the cloud.
- Cascade is waiting for two members to finalize the RCFC connection data for 2024. As of now, 1,211.5 net CERUs have been reported. The 2024 budget expectation of 1,300 Regional Capital Facilities Charges (RCFCs) is possible but unlikely. In 2025 and 2026 1,150 RCFCs are budgeted. Connections have shown a positive trend since August.
- Cascade received notice in January from BrightNight, a battery storage provider, that they were issued two more permits (SEPA and CUP) for their project adjacent to the Powerhouse for which Cascade granted a transmission easement. They are now focusing on a few

remaining construction permits, preparing the site, and sourcing equipment with a new target of summer 2026 for construction kickoff. Previously, BrightNight anticipated the beginning of construction in the first quarter of 2025. If the project goes forward per the terms of the agreement, upon commencement of construction, Cascade will receive \$1.29 million.

Capital Projects and Operations

- Drawdown of the Lake Tapps Reservoir was initiated on November 1, and the reservoir level has been holding steady around 539.6 feet. To mitigate the risk of a later refill of the reservoir potentially caused by the Phase 3 project, staff anticipate maintaining a higher reservoir elevation of 539.85 feet through the rest of winter.
- Phase 3 construction is progressing slowly and is about four to five weeks behind its baseline schedule that was submitted in early August. The contractor (Kiewit) is working on completing scant pile drilled piers and forming wall footings and a center divider wall. Kiewit is expected to allow Cascade to divert up to a minimum of 250 cfs to Cascade's flowline by March to allow Cascade the ability to perform spring refill of the lake.
- All 2024 Outage projects are complete. All discharges from the upper conveyance system have been closed, and the upper conveyance is filling with storm and surface water run-off for spring reservoir refill. Cascade staff is working to close out project construction documentation and 2024 financials.
- Cascade staff has been working with the Washington State Department of Transportation (WSDOT) to negotiate an agreement for the I-90 Lewis Creek Fish Passage Project / Bellevue Issaquah Pipeline – (BIP) Relocation project for almost three years. Cascade's CEO and WSDOT's Regional Administrator met on January 8 due to stalled contract negotiations. As a result, Cascade will host a meeting at Cascade's offices in the next two to three weeks. The meeting will include the state's regional administrator, its construction management staff, the state's Design Build Contractor (DB), and Cascade staff. The goal of this meeting is to better inform the state and its DB of the unique challenges of relocating the BIP and determine a path forward for future contract negotiations.
- Cascade's five-year on-call electrical engineering contract with RH2 expired December 31, 2024. Cascade staff presented a modified scope for these services to the Resource Management Committee on January 9. Staff will finalize the request for qualifications based on RMC feedback and advertise mid-January. Staff anticipates presenting a recommendation to the Board to enter into a contract with one or more engineering firms during the March Board meeting.

Water Efficiency

- Staff continued building the relationship with the King County Housing Authority to help local property managers transition to more water efficient and sustainable landscapes. Cascade has a training for property managers scheduled for March 19.
- Staff have scheduled Cascade Gardener classes, nursery events, and garden tours for the rest of 2025, including a series on turf removal.

- Staff continue to receive requests from local students for support on water bottle filling station projects.
- Cascade is scheduled to attend several community events throughout the year, beginning with the Issaquah Sustainability Fair on April 26.
- Cascade is gearing up for a major push in 2025 for leak detection activities at a wide variety of commercial accounts.
- Cascade has published a new video on its website on installing drip irrigation systems, adding to a growing body of information available to residents on sustainable landscaping and irrigation efficiency.
- Cascade is creating an online student pledge for water efficiency on its website that will be utilized by its vendor for classroom education and teachers.

Intergovernmental and Communications

- The 2025 state regular legislative session began on January 13 and is expected to last 105 days, ending on April 27. Diana Carlen, Gordon Thomas Honeywell Government Relations, will be working with Cascade on tracking bills and water utility issues identified in Cascade's 2025 legislative priorities. The state budget deficit and new appointments to key positions in Governor Ferguson's administration mean this is shaping up to be an interesting and busy session. Staff will continue to work with the Public Affairs Committee by providing updates on policy bills and budget issues.
- Sean Taylor (from Van Ness Feldman, Cascade's federal government relations team in Washington, D.C.) provided a federal briefing for the Public Affairs Committee in January. The presentation discussed what we expect to see in 2025 from Congress and federal agencies. Cascade will continue to monitor federal policy and funding opportunities that might be of interest to members.
- Cascade's Executive Committee is scheduled to meet with Seattle Mayor Harrell on January 31 to discuss regional collaboration opportunities.

<u>Planning</u>

 Cascade has made good progress on developing its abbreviated Water System Plan and will route the draft for Member staff review by the end of the month. This Plan will cover a shorter period than the typically required 10-year period. DOH understands the new supply contracts with Tacoma have not yet been finalized and two to three years of planning for the Tacoma-Cascade Pipeline (TCP) project is a necessary next step. Given this, DOH approved deferring the 10-year comprehensive Water System Plan until the TCP project planning work is completed. In the interim, Cascade will submit a shorter-term Water System Plan and expects to seek Board approval for this in March.

December 23, 2024

Board of Directors Cascade Water Alliance Bellevue, Washington

Report on Accountability

Thank you for the opportunity to work with you to promote accountability, integrity and openness in government. The Office of the Washington State Auditor takes seriously our role of providing state and local governments with assurance and accountability as the independent auditor of public accounts. In this way, we strive to help government work better, cost less, deliver higher value and earn greater public trust.

Independent audits provide essential accountability and transparency for Alliance operations. This information is valuable to management, the governing body and public stakeholders when assessing the government's stewardship of public resources.

Attached is our independent audit report on the Alliance's compliance with applicable requirements and safeguarding of public resources for the areas we examined. We appreciate the opportunity to work with your staff and value your cooperation during the audit.

Sincerely,

Fat Marthy

Pat McCarthy, State Auditor Olympia, WA

Americans with Disabilities

AUDIT RESULTS

Results in brief

This report describes the overall results and conclusions for the areas we examined. In those selected areas, Alliance operations complied, in all material respects, with applicable state laws, regulations, and its own policies, and provided adequate controls over the safeguarding of public resources.

In keeping with general auditing practices, we do not examine every transaction, activity, policy, internal control, or area. As a result, no information is provided on the areas that were not examined.

About the audit

This report contains the results of our independent accountability audit of the Cascade Water Alliance from January 1, 2023 through December 31, 2023.

Management is responsible for ensuring compliance and adequate safeguarding of public resources from fraud, loss or abuse. This includes the design, implementation and maintenance of internal controls relevant to these objectives.

This audit was conducted under the authority of RCW 43.09.260, which requires the Office of the Washington State Auditor to examine the financial affairs of all local governments. Our audit involved obtaining evidence about the Alliance's use of public resources, compliance with state laws and regulations and its own policies and procedures, and internal controls over such matters. The procedures performed were based on our assessment of risks in the areas we examined.

Based on our risk assessment for the year ended December 31, 2023, the areas examined were those representing the highest risk of fraud, loss, abuse, or noncompliance. We examined the following areas during this audit period:

- General disbursement meals with meetings and vendor payments
- Procurement professional services
- Open public meetings compliance with minutes, meetings and executive session requirements
- Financial condition reviewing for indications of financial distress

INFORMATION ABOUT THE ALLIANCE

The Cascade Water Alliance is a joint municipal utility services authority located in Bellevue, Washington. Its membership consists of the cities of Bellevue, Issaquah, Kirkland, Redmond and Tukwila, along with the Sammamish Plateau Water and the Skyway Water and Sewer District. The Alliance was organized to coordinate and plan cooperatively with other regional water providers and local nonmember water utilities, to maximize supply availability and to minimize system costs.

Established in 1999, Cascade Water Alliance converted from a Washington State nonprofit corporation to a Washington State Joint Municipal Service Authority on July 12, 2012. The Alliance supplies over 380,000 King County residents and 20,000 businesses. The Alliance is governed by a Board of Directors that consists of seven elected officials appointed from member entities. Operating expenditures for 2023 totaled \$38 million. The Alliance has thirteen employees and two temporary employees.

ABOUT THE STATE AUDITOR'S OFFICE

The State Auditor's Office is established in the Washington State Constitution and is part of the executive branch of state government. The State Auditor is elected by the people of Washington and serves four-year terms.

We work with state agencies, local governments and the public to achieve our vision of increasing trust in government by helping governments work better and deliver higher value.

In fulfilling our mission to provide citizens with independent and transparent examinations of how state and local governments use public funds, we hold ourselves to those same standards by continually improving our audit quality and operational efficiency, and by developing highly engaged and committed employees.

As an agency, the State Auditor's Office has the independence necessary to objectively perform audits, attestation engagements and investigations. Our work is designed to comply with professional standards as well as to satisfy the requirements of federal, state and local laws. The Office also has an extensive quality control program and undergoes regular external peer review to ensure our work meets the highest possible standards of accuracy, objectivity and clarity.

Our audits look at financial information and compliance with federal, state and local laws for all local governments, including schools, and all state agencies, including institutions of higher education. In addition, we conduct performance audits and cybersecurity audits of state agencies and local governments, as well as state whistleblower, fraud and citizen hotline investigations.

The results of our work are available to everyone through the more than 2,000 reports we publish each year on our website, <u>www.sao.wa.gov</u>. Additionally, we share regular news and other information via an email subscription service and social media channels.

We take our role as partners in accountability seriously. The Office provides training and technical assistance to governments both directly and through partnerships with other governmental support organizations.

MEETING MINUTES OF THE BOARD OF DIRECTORS VIA HYBRID NOVEMBER 20, 2024

1. CALL TO ORDER

At 3:32 p.m. Chair Sweet called the meeting to order. Board Members confirmed that they received the meeting materials and could hear the speakers clearly.

2. ROLL CALL

<u>Board Members Present</u>: City of Bellevue (Hamilton), City of Issaquah (Pauly¹), City of Kirkland (Sweet), City of Redmond (Birney), Sammamish Plateau Water & Sewer District (Warren), Skyway Water and Sewer District (Ault), and City of Tukwila (McLeod)

<u>Board Alternates Present</u>: City of Bellevue (Stokes), City of Redmond (Nuevacamina), Sammamish Plateau Water & Sewer District (Hooshangi)

3. PUBLIC COMMENT

None.

4. EXECUTIVE SESSION

None.

5. APPROVAL OF AGENDA

Motion by Mr. Warren and second by Mr. Ault to approve the meeting agenda as presented. Motion carried unanimously (7-0).

6. CHIEF EXECUTIVE OFFICER'S REPORT

Ray Hoffman, Cascade CEO, reviewed the Chief Executive Officer's Report that was included in the Board Packet, and responded to questions from Board Members.

7. CONSENT ITEMS

- A. Board Meeting Minutes for October 23, 2024.
- B. Motion to authorize the Chief Executive Officer to execute a contract with Confluence Engineering Group to conduct a water quality blending study in an amount not to exceed \$230,000.

¹ Not present for vote on Item 12.

C. Motion to authorize the Chief Executive Officer to renew contracts for vendor and consulting services totaling \$2,191,450 in accordance with the adopted 2025 - 2026 Cascade budget.

Motion by Mr. Warren and second by Ms. Birney to approve Consent Action Items A-C as presented. Motion carried unanimously (7-0).

8. OTHER ACTION ITEMS

A. Motion to adopt Resolution No. 2024-16 adopting Cascade's 2025 Legislative and Public Policy Agenda.

Alison Bennett, Cascade's Communications and Intergovernmental Relations Director, highlighted several items in Cascade's 2025 Legislative and Public Policy Agenda at the federal, state, and local levels.

Motion by Ms. Birney and second by Ms. Pauly to authorize staff to adopt Cascade's 2025 Legislative and Public Policy Agenda. Motion carried unanimously (7-0).

B. Wholesale Contracts Update.

Ed Cebron, Cascade's Chief Economist, presented an update on the progress staff has made in developing the new supply contracts with Tacoma Public Utilities. Final drafts of the contracts are expected to be ready for circulation around Christmas and authorization by the Board in late January 2025. With respect to Seattle Public Utilities, Ray Hoffman informed the Board that Seattle Mayor Bruce Harrell has offered to meet with the Executive Committee to discuss ways to enhance our working relationship.

The Board directed Cascade staff to hold off on sending responses to Mayor Harrell's letter, dated September 10, until the Executive Committee meets with Mayor Harrell.

9. STAFF PRESENTATIONS

A. Turf Removal Program.

Mike Brent, Cascade's Water Resources Manager, presented a new water efficiency program that will provide rebates to customers who agree to remove irrigated turfgrass and replace it with native or drought-tolerant plants. The program aims to reduce outdoor water use and to educate the community that there are alternatives to traditional landscapes.

10. COMMITTEE REPORTS

- A. Executive Committee no meeting held.
- B. Finance & Management Committee Meeting held November 12, 2024. The meeting recap was included in the Board Packet.
- C. Public Affairs Committee Meeting held November 6, 2024. The meeting recap was included in the Board Packet.
- D. Resource & Management Committee Meeting held November 7, 2024. The meeting recap was included in the Board Packet.

11. NEW BUSINESS

None

12. NEXT REGULAR MEETING

Motion by Ms. Birney and second by Mr. Hamilton to cancel all December committee meetings and the December Board meeting. Motion carried unanimously (6-0).

13. ADJOURN

The meeting was adjourned at 4:40 p.m.

APPROVED BY:

Penny Sweet, Chair

Angela Birney, Vice-Chair

DRAFT AGENDA MEMORANDUM

SUBJECT

Motion to authorize the Chief Executive Officer to execute various 2025 Cascade sponsorship agreements for a combined total not to exceed \$47,000 (as shown in the events listed in this Agenda Memo).

BACKGROUND

Pursuant to Resolution 2009-02, sponsorship proposals will be reviewed on their merits and how well they relate to Cascade's mission and bylaws. Cascade's Intergovernmental and Communications and Water Efficiency budgets have allocated funds to cover these sponsorships. The resolution indicates that any sponsorship over \$1,000 requires Board authorization. This proposal is for \$47,000 and is supported by the Chief Executive Officer and the Public Affairs Committee. It is within the budgeted amount for 2025.

Pursuant to CWAC 5.45.030, the Chief Executive Officer recommends that the Board authorize sponsorship agreements with each of the following event organizers in 2025:

					Est.
Event	Area	Date	Est. Cost	Station	Value
Bellevue Family 4 th	Bellevue	7/4	\$4,000	YES	\$8,000
Issaquah Salmon Days	Issaquah	Oct.	\$4,000	YES	\$7,500
Kirkland Concert Series	Kirkland	July/Aug	\$2,500	YES	\$2,500
Redmond Derby Days	Redmond	July	\$3,000	YES	\$6,000
Sammamish Party on the Plateau	Sammamish	August	\$1,000	YES	\$2,000
Skyway Health and Wellness Fair	Skyway	August	\$750	YES	\$1,200
Tukwila Summer Events	Tukwila	July/Aug	\$1,000	YES	\$1,000
WA Environmental Council Gala	Regional	March	\$2,500	NO	\$2,500
Leadership Eastside Mayors Lunch	Eastside	September	\$5,000	NO	\$5,000
Bonney Lake Days/Tunes at Tapps	Lake Tapps	August	\$500	NO	\$500
Beautify Bonney Lake	Lake Tapps	September	\$500	NO	\$500
Bonney Lake Chamber Triathlon	Lake Tapps	September	\$500	NO	\$500
TOTAL FOR COMM/OUTREACH			\$25,250		\$37,200
Water Wise Events (Conservation					
Budget)					
2026 NW Flower and Garden	Degional	February	¢20,000	VES	¢00.000
Festival	Regional	rebluary	\$20,000	TES	\$20,000
Bellevue Farmers' Market	Bellevue	TBD	\$0	YES	N/A
Kirkland Farmers' Market	Kirkland	TBD	\$0	YES	N/A
Kirkland Sustainability Fair	Kirkland	TBD	\$0	YES	N/A

These events meet several Cascade purposes as listed in section 3.3 of the Cascade Water Alliance Joint Municipal Utility Services Agreement. These include support for Cascade to:

- provide a safe, reliable, high quality drinking water supply to meet the current and projected demands of Cascade Members and for Non-Members as determined by Cascade, and to carry out this task in a coordinated, cost-effective, and environmentally sensitive manner;
- d. provide conservation programs to promote the wise and efficient use of resources;
- h. share costs and risks among Members commensurate with benefits received; and
- i. carry out, or to further other water supply purposes that the Members determine, consistent with the provisions of this Agreement.

These events support Cascade's ability to provide safe, reliable, high quality drinking water to meet the needs of Cascade members. These sponsorships are vital in our service area to get our message to key constituents, as well as our members' service areas, and to demonstrate Cascade's commitment to providing quality water. To create a water supply system, Cascade must have the support and cooperation of the communities in which it operates. These events focus on regional collaborative and successful relationships and partnerships, as well as cementing good neighbor relationships.

PROCUREMENT PROCESS

Not applicable.

FISCAL IMPACT

	2025	Spent or	Available	Thia	2025
Budget Line	Budget	Committed	2025	Action	Remaining
		to Date	Budget	ACTION	Balance
Sponsorships	\$30,000	\$0	\$30,000	\$27,000	\$3,000
Community Engagement	\$75,000	\$0	\$75,000	\$20,000	\$55,000

For its \$47,000 investment, Cascade's sponsorship will be noted at events that reach the public and key regional stakeholders. This recognition for Cascade at these events includes being featured on event promotional materials and at events; being listed on respective websites; posters and materials displayed at local businesses advertising; social media; opportunities to display Cascade banner and booths; and areas to display Cascade promotional materials. The promotional value of these events exceeds the investment from Cascade and furthers Cascade's goal of reaching the public and supporting members' communities.

The 2025 Intergovernmental and Communications budget includes up to \$30,000 for sponsorships for events, and this \$27,000 action includes some leeway in case the cost of an event is raised slightly in 2025. Funds are also reserved for other opportunities that may arise during 2025, and those will be presented separately.

The 2025 Water Efficiency budget includes up to \$75,000 for community events and training that will accommodate the \$20,000 cost for the 2026 Northwest Flower and Garden Festival (NWFGF). Cascade will be the primary utility sponsor of the NWFGF which will include many benefits to Cascade including:

- Cascade's logo and website will be prominently displayed and promoted on the NWFGF's website, social media content, press releases, and at the event (this is the largest landscaping and gardening event in Washington).
- Cascade will be featured as a show partner to emphasize sustainable landscaping and gardening.
- Cascade will receive space for its station and the We Need Water wall at no additional cost.
- Cascade will have access to the facility, presenters, and attendees for filming or other social media content development.
- An onsite banner ad will include Cascade's website.
- Cascade will receive a two-page ad in the show's program guide, customizable to include any information Cascade wishes.
- Cascade will be the presenting partner at the Container Showdown, a popular and well attended portion of the NWFGF.
- The Cascade Gardener classes, water efficiency programs, videos, and social media content will be promoted during and after the NWFGF reaching thousands of people.

OPTIONS

- 1. Authorize the Chief Executive Officer to execute various 2025 Cascade sponsorship agreements for a combined total not to exceed \$47,000 (as shown in the events listed in this Agenda Memo).
- 2. Do not authorize the Chief Executive Officer to execute various 2025 Cascade sponsorship agreements and provide alternate direction to staff.

RECOMMENDED ACTION

Authorize the Chief Executive Officer to execute various 2025 Cascade sponsorship agreements for a combined total amount not to exceed \$47,000 (as shown in the events listed in this Agenda Memo).

ATTACHMENTS

None.

AGENDA MEMORANDUM

SUBJECT

Motion to adopt Resolution 2025-03 authorizing the Chief Executive Officer, in consultation with legal counsel, to finalize and execute a five-year temporary construction easement to be granted by Cascade Water Alliance to the U.S. Army Corps of Engineers, related to the Corps' Mud Mountain Dam Fish Passage Project, substantially in the form attached.

BACKGROUND

By Resolution 2018-05, the Board authorized execution of a package of agreements with the U.S. Army Corps of Engineers (Corps), related to the Corps' Mud Mountain Dam Fish Passage Project (MMD FPP). The MMD FPP includes:

- 1. Demolition of the existing 100+ year old barrier structure and the 70-year-old fish trap and haul facility located in Buckley.
- 2. Construction of a new barrier structure.
- 3. Construction of a new fish trap and haul facility designed to meet the conditions of the NMFS Biological Opinion.
- 4. Construction of improvements to the Cascade intake and diversion facilities (the Cascade Intake Improvements).

The 2018 agreements included a five-year temporary construction easement (TCE) for the Corps' short-term access to Cascade's road (2018-2023) and a seven-year TCE for short-term access to Cascade's headworks area (2018-2025).

By Resolution 2023-10, the Board authorized execution of a new TCE for access to specified Cascade's road (2024-2029). Number 1 and 2 are completed, and Number 3 is being finalized.

Now, a new five-year TCE for short term access to Cascade's headworks area (2025-2030) is needed for the work to be done under Number 3 and 4.

PROCUREMENT PROCESS

N/A

FISCAL IMPACT

Cascade will be compensated for the new five-year TCE as follows: In exchange for the 2024-2029 five-year TCE for road access and this new 2025-2030 TCE for headworks access, the Corps will construct Cascade's drainage outlet.

OPTIONS

- 1. Adopt Resolution 2025-03 authorizing the Chief Executive Officer, in consultation with legal counsel to finalize and execute a five-year temporary construction easement to be granted by Cascade Water Alliance to the U.S. Army Corps of Engineers, related to the Corps' Mud Mountain Dam Fish Passage Project, substantially in the form attached.
- 2. Do not adopt Resolution 2025-03 and provide alternate directions to staff.

RECOMMENDED ACTION

Adopt Resolution 2025-03 authorizing the Chief Executive Officer, in consultation with legal counsel to finalize and execute a five-year temporary construction easement to be granted by Cascade Water Alliance to the U.S. Army Corps of Engineers, related to the Corps' Mud Mountain Dam Fish Passage Project, substantially in the form attached.

ATTACHMENTS

- 1. Resolution 2025-03.
- 2. Final Draft of Five-year Temporary Construction Easement to be granted by Cascade to the Corps.

CASCADE WATER ALLIANCE RESOLUTION NO. 2025-03

A RESOLUTION OF THE BOARD OF DIRECTORS OF THE CASCADE WATER ALLIANCE, A WASHINGTON MUNICIPAL CORPORATION AUTHORIZING THE CHIEF EXECUTIVE OFFICER TO EXECUTE A TEMPORARY CONSTRUCTION EASEMENT AND AGREEMENT WITH THE UNITED STATES ARMY CORPS OF ENGINEERS RELATED TO THE CORPS' MUD MOUNTAIN DAM FISH PASSAGE PROJECT

WHEREAS the Cascade Water Alliance ("Cascade") is a Washington municipal corporation formed under authority of the Joint Municipal Utilities Authority Act (Chapter 39.106 RCW) to provide water supply to its Members; and

WHEREAS Cascade owns property necessary for the United States Army Corps of Engineers' ("Corps") construction, access and operation of the Corps' Mud Mountain Dam Fish Passage Project ("MMD FPP"); and

WHEREAS by Resolution No. 2018-05, the Cascade Board of Directors ("Board") authorized execution of a package of agreements so the Corps could engage in the following activities: (1) Demolition of the existing 100+ year old barrier structure and the 70-year-old fish trap and haul facility located in Buckley; (2) Construction of a new barrier structure; (3) Construction of a new fish trap and haul facility designed to meet the conditions of the NMFS Biological Opinion; and Construction of improvements to the Cascade intake and diversion facilities (the Cascade Intake Improvements); and

WHEREAS by Resolution 2023-10, the Board authorized the execution of a new fiveyear Temporary Construction Easement (TCE) under which the Corps could continue to access Cascade's roads to complete activities (3) and (4); and

WHEREAS the Corps has requested a new five-year TCE under which the Corps could continue to access Cascade's headworks area to complete activities (3) and (4); and

WHEREAS in support of the Corps' MMD FPP and for valuable consideration, the Board now desires to authorize the Chief Executive Officer, in consultation with legal counsel, to finalize and execute a new five-year Temporary Construction Easement, substantially in the form of the attached.

NOW, THEREFORE, BE IT RESOLVED BY THE BOARD OF DIRECTORS OF THE CASCADE WATER ALLIANCE, as follows:

<u>Section 1. Adoption</u>. The Board authorizing the Chief Executive Officer, in consultation with legal counsel to finalize and execute a five-year temporary construction easement to be granted by Cascade Water Alliance to the U.S. Army Corps of Engineers, related to the Corps' Mud Mountain Dam Fish Passage Project, substantially in the form attached.

Section 2. Effect. This Resolution shall be in full force and effect on the date of its adoption.

ADOPTED AND APPROVED by the Board of Directors of the Cascade Water Alliance at a regular meeting thereof, held on the 22nd day January 2025.

BELLEVUE, WASHINGTON 98004

GRANTEE:

UNITED STATES OF AMERICA

PARCEL NO .:

0619021006

Abbreviated Legal Description: Portion of Section 2, Township 19 North, Range 6 EWM, Pierce County, Washington

The GRANTOR, Cascade Water Alliance, a municipal corporation, as legal successor of Cascade Water Alliance, a non-profit corporation, for value received the receipt of sufficiency of which is hereby acknowledged, does hereby grant, bargain, sell and convey to the United States of America an easement and right-of-way for the uses and purposes set forth hereinafter in connection with the Mud Mountain Dam Fish Passage Project, in, upon, over and across the following described parcel of land situate, lying and being in the County of Pierce, State of Washington (the "Easement"):

THE LEGAL DESCRIPTION IS ATTACHED AS EXHIBIT A

This Conveyance is for the Department of the Army.

The Easement and rights hereby granted include the right, power, privilege and easement in, on, over and across the above-described property for the following purposes:

A temporary easement and right-of-way in, on, over, and across Tract No. B101E-8 (the "Premises"), for a period not to exceed 5 years, beginning on March 2, 2025, for use by the United States, its representatives, agents, and contractors as a work area including the right to move, store, and remove equipment and supplies, and erect and remove temporary structures on the land and to perform any other work necessary and incident to the construction of the Mud Mountain Dam Fish Passage Project, together with the right to trim, cut, fell, and remove therefrom all trees, underbrush, obstructions, and any other vegetation, structures, or obstacles

within limits of the right-of-way; reserving, however, to the GRANTOR, its successors and assigns, the right to access, operate, use, patrol, maintain, repair, upgrade, reconstruct and replace GRANTOR's facilities located within or adjacent to the Premises; together with all other such rights and privileges as may be used without interfering with or abridging the rights and easement hereby acquired to include; subject however, to existing easements for public roads and highways, public utilities, railroads, and pipelines.

Upon expiration of this easement and subject to improvements constructed pursuant to the design requirements for the Project identified above, the premises will be restored to substantially the same condition as that which existed at the time possession was granted to the United States unless otherwise agreed by the parties.

In exercising its rights under this Easement, GRANTEE shall comply with all applicable laws and regulations now or hereafter enacted pertaining to the Project. Further, GRANTEE is responsible for meeting all applicable federal, state and local safety and other codes, and for obtaining all applicable federal, state and local permits, licenses, or other authorizations required for the construction and operation of the Project including, but not limited to, such laws or permits as may pertain to building, zoning, shoreline regulation, environmental protection or other matters pertaining to the general public health, safety and welfare to the extent Congress has waived sovereign immunity. Nothing in this Easement shall be interpreted as a waiver of sovereign immunity by the United States.

GRANTOR does not assume any liability for injury or damage to any person or property incident to or that may arise during and in consequence of the GRANTEE's or its assignees use, occupancy and enjoyment of the Premises or their construction of, erection of, maintenance of, or their failure to properly and safely construct, operate and maintain the Project or to use and occupy said Premises.

GRANTEE shall, consistent with the purposes of the Project, construct the Project in a safe, careful, and workmanlike manner so as to avoid damage to the GRANTOR'S facilities or interference with the GRANTOR'S operations and to prevent injury to property of the GRANTOR and to the life and property of third persons. GRANTEE agrees, to the extent permitted by federal law, to indemnify and hold harmless GRANTOR, its members, and its elected or appointed officers, officials, and employees from any damage caused by GRANTEE, its employees and/or contractors on the Premises, in the exercise of rights under this Easement, provided, no obligation or payment by GRANTEE may exceed the amount of funds authorized and available for such purpose at the time of the damage.

In any litigation or other proceeding arising out of this Easement, the substantially prevailing party shall be entitled to an award of its reasonable attorneys' fees and other costs incurred therein to the extent permitted by federal law.

Invalidation of any of the provisions contained in this Easement, or of the application thereof to any person, by judgment or court order, shall in no way affect any of the other provisions thereof or the application thereof to any other person and the same shall remain in full force and effect.

The failure of any party to insist upon strict performance of any of the terms, covenants or conditions hereof shall not be deemed a waiver of any rights or remedies which that party may have hereunder or at law or equity and shall not be deemed a waiver of any subsequent breach or default in any of such terms, covenants or conditions.

GRANTOR alone shall pay any and all taxes, charges or use fee(s) levied by any governmental agency against GRANTEE's interest in the Premises, or against any of GRANTOR's real property as a result of the Easement herein granted. GRANTEE shall not cause liens of any kind to be placed against the Premises or any of GRANTOR's other real property.

GRANTEE's obligation to pay or reimburse any money under this Easement is subject to express Congressional authorization and the availability of fund appropriated for this purpose to the Department of the Army, and nothing in this Easement shall be interpreted to require obligations or payments by the GRANTEE in violation of the Anti-Deficiency Act, 31 U.S.C. §1341. The provisions of this clause are without prejudice to any rights GRANTOR may have to make a claim under applicable laws for any other damages than provided herein. Nothing in this Easement may be considered as implying that the Congress will at a later date authorize and appropriate funds to meet deficiencies.

AGENDA MEMORANDUM

SUBJECT

Motion to adopt Resolution No. 2025-02 adopting the 2025 Integrated Aquatic Vegetation Management Plan with direction to the Chief Executive Officer to submit the Plan to the Department of Ecology and proceed with implementation of the Plan.

BACKGROUND

An Integrated Aquatic Vegetation Management Plan ("IAVMP" or "Plan") is required to receive Department of Ecology ("Ecology") grants. In 2024, Cascade received a \$75,000 Ecology grant to chemically treat milfoil in the Lake Tapps Reservoir. An IAVMP is also beneficial in providing direction on managing aquatic vegetation in the Lake Tapps Reservoir.

Cascade developed its first IAVMP in 2010 and updated it in 2015. The 2025 IAVMP has a 10year planning horizon and is a living document. The Plan's goal is to provide a long-term, adaptive management strategy for aquatic plants in the Lake Tapps Reservoir that is cost effective, ecologically sustainable, and maintains the reservoir's water quality.

Like the 2010 and 2015 IAVMPs, the 2025 IAVMP continues to focus on controlling milfoil. In addition, it recognizes the need to identify and manage other nuisance aquatic plants to meet the Plan's goal. To that end, the 2025 IAMVP has three objectives:

- 1. Continue to maintain a low density of milfoil using the most cost-effective and environmentally friendly method(s) available.
- 2. Minimize or prevent overgrowth of other non-native plants (as well as over-production of nuisance native species) that are not currently prevalent in the Lake Tapps Reservoir through early detection and management.
- 3. Identify new aquatic plant infestations early and minimize introductions.

To achieve these objectives, the 2025 IAVMP makes two recommendations:

- 1. Continue the use of herbicides to control milfoil and other invasive, non-native plants.
- 2. Conduct reservoir-wide surveys on a regular basis to monitor the presence and absence of milfoil as well as other non-native and native nuisance plants to prevent infestations and overgrowth.

Cascade applied the Board-adopted Drinking Water Quality Policy Framework to the two recommendations (Appendix C of the IAVMP) and determined that both enable Cascade to maintain high water quality in the reservoir. The second recommendation is limited to conducting surveys and does not recommend treating other nuisance plants at this time.
Cascade staff completed SEPA review, issued a Determination of Non-Significance on December 18, 2024, and made the Plan available for public comment. No comments were received by the January 6, 2025 deadline.

Staff presented the 2025 IAVMP to the Resource Management Committee on January 9, 2025 and received the committee's support.

PROCUREMENT PROCESS

Not applicable.

FISCAL IMPACT

There are no direct costs associated with the Board approving the 2025 IAVMP. The costs to implement the first recommendation (continued use of herbicides to control milfoil) is included in the 2025-2026 adopted budget. Funding to implement the second recommendation (reservoir-wide surveys) will not be needed until 2027. Staff will request funding for the next survey via the 2027-2028 budget process.

OPTIONS

- 1. Adopt Resolution No. 2025-02 adopting the 2025 Integrated Aquatic Vegetation Management Plan (Attachment 2) with direction to the Chief Executive Officer to submit the Plan to the Department of Ecology and proceed with implementation of the Plan.
- 2. Do not adopt Resolution No. 2025-02 and provide alternative direction to staff.

RECOMMENDED ACTION

Adopt Resolution No. 2025-02 adopting the 2025 Integrated Aquatic Vegetation Management Plan (Attachment 2) with direction to the Chief Executive Officer to submit the Plan to the Department of Ecology and proceed with implementation of the Plan.

ATTACHMENTS

- 1. Resolution No. 2025-02
- 2. 2025 Integrated Aquatic Vegetation Management Plan

Attachment 1

CASCADE WATER ALLIANCE RESOLUTION NO. 2025-02

A RESOLUTION OF THE BOARD OF DIRECTORS OF THE CASCADE WATER ALLIANCE, A WASHINGTON MUNICIPAL CORPORATION, ADOPTING THE 2025 INTEGRATED AQUATIC VEGETATION MANAGEMENT PLAN

WHEREAS, the Cascade Water Alliance ("Cascade") is a Washington municipal corporation formed under authority of the Joint Municipal Utilities Authority Act (Chapter 39.106 RCW) to provide water supply to its Members;

WHEREAS, an Integrated Aquatic Vegetation Management Plan is beneficial in providing direction on managing aquatic vegetation in the Lake Tapps Reservoir and is required to receive Department of Ecology grants;

WHEREAS, Cascade completed its first Integrated Aquatic Vegetation Management Plan in 2010 and updated the Plan in 2015;

WHEREAS, Cascade completed the 2025 Integrated Aquatic Vegetation Management Plan with a goal to provide a long-term, adaptive management strategy for aquatic plants in the Lake Tapps Reservoir that is cost effective, ecologically sustainable, and maintains the reservoir's water quality; and

WHEREAS, the Board now desires to adopt the 2025 Integrated Aquatic Vegetation Management Plan.

NOW THEREFORE BE IT RESOLVED BY THE BOARD OF DIRECTORS OF CASCADE WATER ALLIANCE as follows:

Section 1. Adoption of the 2025 Integrated Aquatic Vegetation Management Plan. The Board hereby adopts the 2025 Integrated Aquatic Vegetation Management Plan (Attachment 2) and directs the CEO to submit the Plan to the Department of Ecology and proceed with implementation of the Plan.

Section 2. Effect. This Resolution shall be in full force and effect on the date of its adoption.

ADOPTED AND APPROVED by the Board of Directors of the Cascade Water Alliance at a meeting thereof, held on the 22nd day of January 2025.

LAKE TAPPS RESERVOIR Integrated Aquatic Vegetation Management Plan

Purpose

The purpose of the Lake Tapps Integrated Aquatic Vegetation Management Plan (IAVMP) is to provide for a long-term, adaptive management strategy for aquatic plants in the Lake Tapps Reservoir that is cost-effective, ecologically sustainable, and maintains the reservoir's water quality.

Executive Summary

In 2009, Cascade Water Alliance (Cascade) purchased the Lake Tapps Reservoir from Puget Sound Energy (PSE) as a source of future drinking water supply for Cascade's member agencies. Although the reservoir is unlikely to be used for this purpose for several decades, it is critical to protect the water quality today to avoid having to restore it in the future.

Currently, the Lake Tapps Reservoir is used for recreation (e.g. swimming, boating, fishing), fish and wildlife habitat, aesthetics, and wildlife viewing. Most lake-users are waterfront property owners, homeowner association (HOA) members, and residents from the Seattle metropolitan area. The vast majority of the shoreline is developed with residential properties.

Data from 2004 to 2021 indicates the trophic status¹ of the Lake Tapps Reservoir has been oligotrophic (low biological activity) to mesotrophic (moderate biological activity) (Herrera 2022). This low to moderate biological activity shows the reservoir is currently in a healthy state. Maintaining high water quality in the Lake Tapps Reservoir is important for Cascade's future use as a drinking water source as well as for current and future recreational purposes. Keeping the reservoir in a healthy state could help lower capital and operating costs of removing contaminants, including taste and odor compounds, at the future treatment plant and reduce the risk of service disruptions.²

It is critical to protect the water quality in the Lake Tapps Reservoir today to avoid having to restore it in the future.

Eurasian watermilfoil (*Myriophyllum spicatum*) (milfoil) is a highly invasive, non-native aquatic plant and has been prevalent in the Lake Tapps Reservoir since PSE's ownership. Today, it is by far the most problematic aquatic plant in the reservoir. Classified as a Class C (non-regulated) noxious weed by Pierce County, the County recommends controlling milfoil. Milfoil is very aggressive and can form dense mats

¹ Trophic status is a measure of the overall biological productivity in a body of water. It is a key indicator of water quality and is based on the total biomass of living organisms in the water at a given time.

² Higher levels of contamination in raw water can result in operational problems in water treatment plants, such as filters getting clogged, which in turn could result in service disruptions.

on the water surface that interfere with navigation, disrupt natural water flow and mixing, limit light for native plants, clog water in-takes, and disrupt recreational activities. Importantly, when milfoil dies back in the fall, the decaying plants use up dissolved oxygen, adding nutrients to the water that potentially increase algae growth and related water quality problems (King County 2010).

In 2010, Cascade completed its first *Integrated Aquatic Vegetation Management Plan* (IAVMP). At that time, milfoil was classified by the State of Washington and Pierce County as a Class B noxious weed, requiring control. As such, the 2010 IAVMP's goal was to develop a long-term strategy to eradicate milfoil in the Lake Tapps Reservoir, and Cascade began treating milfoil with herbicides along with other control measures. By 2015, Pierce County no longer regulated milfoil. Thus, Cascade's 2015 IAVMP had a goal of implementing approaches that would result in a low density of milfoil populations. After evaluating various methods of control, the 2015 IAVMP recommended the continued application of herbicides to reduce milfoil populations.

As with the 2015 IAVMP, the 2025 IAVMP has a 10-year planning horizon and is a living document. The goal of the 2025 IAVMP is to provide a long-term, adaptive management strategy for aquatic plants in the Lake Tapps Reservoir that is cost-effective, ecologically sustainable, and maintains the reservoir's water quality. While the 2025 IAVMP continues to focus on controlling milfoil, it also recognizes the need to identify and manage other nuisance aquatic plants to meet the Plan's goal.

In the summers of 2023 and 2024, Cascade conducted a reservoir-wide survey of aquatic plants. In total, 18 aquatic plant species were identified at 412 sampling points. Of the 18 species identified, four (including milfoil) were non-native. Among the most prevalent native species was native pondweed, whose population has increased over the past few years.

Since continued effective management of aquatic plants is key to keeping the reservoir healthy and from moving to a state of high biological activity (eutrophication), the 2025 IAVMP has three objectives:

- 1. Continue to maintain a low density of milfoil using the most cost-effective and environmentally friendly method(s) available.
- 2. Minimize or prevent overgrowth of other non-native plants (as well as over-production of nuisance native species) that are not currently prevalent in the Lake Tapps Reservoir through early detection and management.
- 3. Identify new aquatic plant infestations early and minimize introductions.

To achieve these objectives, the 2025 IAVMP makes two recommendations:

- 1. Continue the use of herbicides to control milfoil and other invasive, non-native plants.
- 2. Conduct reservoir-wide surveys on a regular basis to monitor the presence and absence of milfoil as well as other non-native and native nuisance plants to prevent infestations and overgrowth.

Cascade has a formal Drinking Water Quality Policy Framework (Policy Framework), which outlines a process to evaluate potential water quality actions. Cascade applied its Policy Framework to both recommendations and determined both enable Cascade to maintain high water quality in the reservoir. The second recommendation is limited to surveys. If Cascade identifies issues with potential overgrowth of other nuisance plants during the surveys, it will apply the Policy Framework before taking action.

Problem Statement

Cascade purchased the Lake Tapps Reservoir in 2009 from PSE as a source of future drinking water supply for its member agencies. Although the reservoir is unlikely to be used for this purpose for several decades, it is important to protect the water quality today to avoid having to restore it in the future.

Milfoil, a highly invasive aquatic plant, has been prevalent in the Lake Tapps Reservoir since PSE's ownership. Milfoil is capable of growing in up to 30 feet of water but typically grows in one to 15 feet. It primarily spreads by stem fragments that can produce new roots and root crowns. Milfoil is very aggressive and can form dense mats on the water surface that interfere with navigation, disrupt natural water flow and mixing, limit light for native plants, clog water in-takes, and disrupt recreational activities. Studies have shown diminished lakefront property values on the order of <1% to 19% with incremental increase in milfoil abundance (Zhang et al. 2010, Olden et al. 2014).

Continued effective management of milfoil, as well as other invasive aquatic vegetation, is a key to protecting the Lake Tapps Reservoir's water quality for future municipal supply and current beneficial uses. Importantly, when milfoil dies back in the fall, the decaying plants use up dissolved oxygen, adding nutrients to the water that potentially increase algae growth and related water quality problems (King County 2010). Through annual chemical treatment, Cascade has maintained a low density of milfoil in the reservoir. Continued effective management of milfoil, as well as other invasive aquatic vegetation, is a key to protecting the reservoir's water quality for future municipal supply.

Cascade has no regulatory obligations or contractual obligations with the Lake Tapps Reservoir community, Tribes, or other

stakeholders to control milfoil. Nonetheless, as noted above, keeping milfoil and other invasive vegetation growth in check provides current operational and future drinking water quality benefits to Cascade. Controlling milfoil also maintains the ecological balance of the reservoir (protecting native plants and fish) and provides beneficial uses to the community in the form of swimming, boating, fishing, aesthetics, fish and wildlife habitat, and wildlife viewing.

Protecting Water Quality for Future Municipal Use

Trophic status is a measure of the overall biological productivity in a body of water. It is a key indicator of water quality and is based on the total biomass of living organisms in the water at a given time. Herrera Environmental Consultants (Herrera) carried out two years of baseline/routine water quality monitoring in the Lake Tapps Reservoir during water years (WY) 2020 and 2021 as part of Cascade's long-term Water Quality Monitoring Program (WQMP) (Herrera 2022).

Looking at data from 2004 to 2021, the trophic status of the Lake Tapps Reservoir has been in the oligotrophic (low biological activity) to mesotrophic (moderate biological activity) range (Herrera 2022). There have been minor algal blooms in Lake Tapps Reservoir. An unusual bloom was reported by reservoir residents in April 2021 and species of cyanobacteria were observed in the reservoir, although infrequently, in 2020 and 2021 (Herrera 2022). This low to moderate biological activity shows the Lake Tapps Reservoir is currently in a healthy state, and continued effective management of aquatic plants is

key to keeping the reservoir healthy and from moving into the state of high biological activity (eutrophication). Eutrophication occurs when excessive nutrient enrichment of a water body can lead to water quality issues such as the formation of harmful algal blooms (HABs), excessive algal blooms and scums, low water clarity, and the depletion of oxygen levels. Sources of nutrients, primarily phosphates and nitrates, may include watershed inputs, failing septic systems, agriculture, stormwater runoff, animal waste, and the decay of aquatic plants. Submersed aquatic plants, such as milfoil, that are rooted in the lakebed, obtain most of their nutrients from the sediment, which is returned to the water column when the plants decompose and is available for algae growth (King County 2010). Over time, this repeated contribution of nutrients, regardless of source, can lead to

ecosystem imbalance and potentially eutrophication.

Water supply reservoirs with high concentrations of dissolved organic material (DOM) may result in high levels of chlorinated organic molecules (contaminants) such as trihalomethanes (THMs) in finished drinking water (Cooke and Carlson 1990). A shift to a eutrophic state will see an increase in oxygen demand in deeper water, increased plant growth (which, for water supply reservoirs, can result in diminished raw water In addition to reduction in nutrient inputs, controlling milfoil and the overgrowth of other non-native plants (and potentially overgrowth of natives) is key to slowing down eutrophication.

quality), loss of reservoir volume, increased THM precursors, increased taste and odor problems associated with geosmin and MIB (2-methylisoborneol) produced by cyanobacteria, and increased drinking water treatment cost (Cooke and Carlson 1990). Although the Lake Tapps Reservoir is currently a low productivity waterbody with good water quality, there have been detections of cyanobacteria and the taste and odor compound, geosmin (Herrera 2020).

In nearby Spanaway Lake, also in Pierce County, there have been nearly annual exceedances of state recreational guidelines for microcystin. Microcystins are the most commonly measured and detected cyanotoxins and are potent liver toxins and possible human health carcinogens (EPA 2024). On August 20, 2024, Spanaway Lake was closed due to toxic algae. That closure was lifted September 30, 2024, following treatment with algaecide and lanthanum (a phosphorus-inactivation agent). At the national level, it was estimated that in Lake Waco (Texas), the city incurred an estimated \$70 million between 2002 and 2012 to address tap water taste and odor problems associated with algae blooms (Dunlap 2015).

Management Goal and Objectives

Cascade's goal is to continue to protect water quality in the Lake Tapps Reservoir to ensure long-term sustainable supplies for a variety of uses, with priority placed on future municipal water supply.

To achieve this goal, Cascade aims to continue to manage nutrient loading in the Lake Tapps Reservoir through the following objectives:

Maintain a low density of milfoil using the most cost-effective and environmentally friendly method(s) available.

Minimize or prevent overgrowth of other non-native plants (as well as over-production of nuisance native species) that are not currently prevalent in the Lake Tapps Reservoir through early detection and management.

Identify new aquatic plant infestations early and minimize introductions.

Watershed and Waterbody Characteristics

Watershed Characteristics

The Lake Tapps Reservoir is east of Tacoma, Washington, near the cities of Bonney Lake and Auburn in north central Pierce County. It is in the northwestern portion of the Puyallup-White River Water Resource Inventory Area (WRIA) 10 (**Figure 1**). WRIA 10 covers 1,000 square miles and drains the Puyallup, Carbon, and White Rivers to Commencement Bay and Puget Sound in Tacoma (Ecology 2021). The southeastern portion of the WRIA is heavily forested while the western portion is characterized as urban and agricultural. The area adjacent to the Lake Tapps Reservoir is predominantly urban (residential and commercial) with some forested and agricultural areas. The area adjacent to the White River is primarily classified as forest (evergreen and mixed) and barren. The Lake Tapps Reservoir is considered a Shoreline of Statewide Significance as it has a surface acreage of 1,000 acres or more measured at ordinary high-water mark (OHWM) (Pierce County 2024).

Source: Ecology, 2021.

Figure 1 WRIA 10 Vicinity Map and Land Uses

Lake Tapps Reservoir Characteristics

The region currently occupied by the Lake Tapps Reservoir was once four lakes (Tapps, Kirtley, Crawford, and Church Lakes) (**Figure 2**). Early in the 1900s, Puget Sound Power and Light's White River Power Plant Project constructed a dynamic system of dikes, flumes, diversions, pipes, and valves (**Figure 3**) constructed around the four lakes to form the Lake Tapps Reservoir. This context may explain some of its shoreline bathymetric complexity (**Figure 4**).

U.S. Geological Survey map, dated April 12, 1900, prior to the construction of infrastructure that formed the Lake Tapps Reservoir.

Early public outreach materials for Puget Sound Power and Light's White River Power Plant Project.

The historical and current source of water to the Lake Tapps Reservoir is the White River (**Figure 5**). The water quality of the Lake Tapps Reservoir is largely characterized by the chemical and biological attributes of the White River. The White River originates from the Emmons and Fryingpan Glaciers of Mount Rainer and contributes a significant bedload and suspended sediment load to the lake. When Lake Tapps was operated for power production, large diversions from the White River carried a high suspended solids load to the lake. Also at that time, hydraulic residence time at mean flow (949 cfs) was approximately 36 days and decreasing to 17 days at maximum flow (2,000 cfs) (Mueller 1997). Inflows were reduced in 2004-2006, averaging 159 cfs, which produced a residence time of 277 days. As a result of reduced suspended solids and the nearly sevenfold decrease in residence time, summer Secchi disc (SD) transparency during 2004-2006 increased from a historical average of 1 to 3.1 meters, allowing more light penetration for aquatic plant growth.

Until 2004, the reservoir was operated as a hydropower facility by PSE, with water released back to the White River through a tailrace canal on the reservoir's west side. When the reservoir was used for hydropower generation, water flow in the 20.7 miles of White River between the diversion dam and tailrace was often reduced to 30 cfs in the White River, resulting in impacts to water quality and the native fisheries.

Bathymetric map of the Lake Tapps Reservoir in 5-foot increments.

Schematic of water inflow and outflow at the Lake Tapps Reservoir.

Over time, instream flow requirements were increased, and due to the difficulty of generating enough power with the higher instream flow requirements, PSE decided to stop generating power in 2004.

Cascade purchased the Lake Tapps Reservoir in 2009 and negotiated increased instream flows with the Tribes with the 2008 White River Management Agreement. This resulted in even longer water residence time and increased water clarity in the Lake Tapps Reservoir, which potentially contributed to the more prolific growth of submersed aquatic vegetation.

Since 2009, water has been diverted from the White River from April 15 to October 31 to maintain recreational water levels in the Lake Tapps Reservoir at "normal full pool" (elevation 541.5 to 543 feet) per an agreement with the Lake Tapps Reservoir community.

The Lake Tapps Reservoir is routinely drawn down in the winter, typically from November 1 to February 1 (**Figure 6**). This drawdown period is used to conduct maintenance and repair work on the dikes and other operational structures and to ensure waves from severe winter storms do not overtop the reservoir's dikes. These drawdowns have been attributed to reducing the presence of invasive aquatic plants; however, it should be noted that rainfall during the drawdown months coupled with the temperate climate does not contribute to a decrease in plant abundance or density.

The Lake Tapps Reservoir has a surface area of 2,750 acres with the capacity to impound 46,700 acre-feet of water. The maximum depth is 80 feet with a mean depth of roughly 25 feet. The reservoir has approximately 45 miles of complex shoreline characterized by numerous islands and peninsulas.

Aerial imagery from 2015 when the Lake Tapps Reservoir was drawn down for infrastructure repairs.

Approximately 1,600 residences are immediately adjacent to the Lake Tapps Reservoir with about 5,050 residences within a quarter mile of the lake. Much of the shoreline is characterized by cobble and gravel sediment bars with extensive armoring and numerous private boat launches. Silty sediment is more common to backwater areas and channels between islands.

Beneficial Uses of Lake Tapps Reservoir

Current beneficial uses of the Lake Tapps Reservoir include swimming, boating, fishing, aesthetics, fish and wildlife habitat, and wildlife viewing. The reservoir also provides views of Mount Rainier. Warm water fish species (largemouth bass, smallmouth bass, and yellow perch), rainbow trout, and tiger musky are popular sport fisheries at the reservoir. There are two public parks with boat launches on the reservoir-North Lake Tapps Park and Allan Yorke Park--with numerous access points for other recreational uses such as picnic facilities, playgrounds, athletic fields, hike/bike trails, and golf (**Figure 7**). Most reservoir-

The vast majority of the Lake Tapps Reservoir shoreline is developed with residential properties, and beneficial uses include swimming, fishing, boating, and fish and wildlife habitat. users are waterfront property owners, HOA members, and residents from the Seattle metro area. The vast majority of the shoreline is developed with residential properties.

The Washington Department of Natural Resource (WDNR) Heritage Program database was reviewed. No rare species or rare and high-quality ecosystems, known as Element Occurrences (EOs), were found (WDNR 2024). Inclusion of rare plant communities could require additional protections.

Cascade purchased the Lake Tapps Reservoir as a source of future drinking water supply for its member agencies, with the purpose of meeting Cascade's mission to provide clean, safe, and reliable drinking water. At this time, Cascade expects to use the Lake Tapps Reservoir for municipal supply starting in the 2060s.

Location of Recreational Areas (Beneficial Uses) at Lake Tapps

Aquatic Plant Characteristics

Myriophyllum spicatum, Eurasian watermilfoil (milfoil), is widely known to alter aquatic ecosystems by forming dense mats that shade out other aquatic plants, degrade water quality, inhibit water flow, and impact recreational activities (Washington State Noxious Weed Board 2024). Below the plant canopy, dissolved oxygen is routinely lower, there are increased shifts in daily pH levels, and sedimentation is increased (Gettys et al. 2020, Cooke et al. 2005, Frodge et al. 1990). The plant canopy also physically limits the mixing of atmospheric oxygen within the water column (Frodge et al. 1990). Such low or highly fluctuating dissolved oxygen levels in the water column provide poor habitat for invertebrates and fish.

A reservoir-wide survey of aquatic plants in the Lake Tapps Reservoir was conducted by ESA and Cascade in 2023 and completed in 2024 (Appendix A). There were two components to the survey: 1) collection of rake grab samples to assess distributions and densities of plant species within the littoral zone and 2) a hydroacoustic survey to assess submerged aquatic plant coverage. Survey data was used to identify areas with current and potential aquatic plant problems and assess the effectiveness of management activities. In addition to milfoil, other non-native aquatic plants known to occur in the

Milfoil is the most problematic plant in the Lake Tapps Reservoir; it is nonnative, aggressive, and can form dense mats that degrade water quality, inhibit water flow, and impact recreational activities.

Lake Tapps Reservoir include wild celery (*Vallisneria americana*), yellow flag iris (*Iris pseudacorus*), and fragrant waterlily (*Nymphaea odorata*). There are at least 14 native submersed aquatic plants present. Most common are long-leaved/ribbon-leaved pondweed (*Potamogeton nodosus/epihydrus*³), stonewort (*Nitella* sp.), water nymph (*Najas guadalupensis*), and Canadian waterweed (*Elodea canadensis*).⁴ Emergent aquatic plants are uncommon to the Lake Tapps Reservoir due to heavy water level fluctuation and shoreline armoring; however, yellowflag iris appears to be expanding (*Iris pseudacorus*).

By far the most problematic aquatic plant in the Lake Tapps Reservoir is milfoil, which was introduced to the U.S. from Europe in the 1940s and is now the most widespread submersed aquatic weed in the northern U.S. (Madsen 2009). *M. spicatum* is a Class B Noxious Weed in Washington, meaning prevention and containment are the primary goals (WAC 16-750-011). Species are "designated" for control at the state level (by region). Milfoil is non-designated in Region 2, which includes Pierce County. Though it is not known exactly when milfoil was introduced or became established in the Lake Tapps Reservoir, it was noted as an issue with the Lake Tapps Community Task Force in 2000, and the PSE Reservoir Management Agreement between PSE and the Lake Tapps Community addressed milfoil.

Milfoil is capable of growing in up to 30 feet of water but typically grows in 1 to 15 feet. Though milfoil produces flowers and seeds, it primarily spreads by stem fragments that can produce new roots and root crowns. The starch-rich stems and root crowns of milfoil allow it to overwinter and survive long periods in the water or sediment. Fragments are commonly created mechanically by boat props; however, milfoil

³ Identification unconfirmed

⁴ ESA (Environmental Science Associates). Lake Tapps Reservoir reservoir-wide survey conducted 2023-2024 (see Appendix A)

naturally fragments as part of its lifecycle. Like most invasive aquatic plants, milfoil forms thick surface mats that can impact water quality, interfere with recreation and fishing, and limit access to docks.

Past Management Efforts

In 2010, in part funded by a grant from the Washington Department of Ecology (Ecology), Cascade completed and began implementing its first IAVMP, a plan to manage milfoil in the Lake Tapps Reservoir. At that time, milfoil was classified by the State of Washington and Pierce County as a Class B noxious weed requiring control and spread-prevention measures. The 2010 IAVMP's purpose was to develop a long-term strategy to eradicate milfoil in the Lake Tapps Reservoir, continue improving

Managing milfoil growth in the reservoir provides operational benefits to Cascade, as well as recreational and water quality benefits. existing beneficial and recreational uses, and ensure water quality to meet future drinking water demands. Implementation of the 2010 IAVMP was successful but did not achieve the goal of eradicating milfoil.

Today, the Washington State Department of Agriculture exempts Pierce County from its classification of milfoil as a Class B weed, and the Pierce County Noxious Weed Control Board considers milfoil to be a non-regulated noxious weed for which it

encourages voluntary control measures. In addition to having no regulatory obligations to control milfoil,

Cascade also has no contractual obligations with the Lake

Tapps Reservoir community, Tribes, or other stakeholders.⁵ Nonetheless, managing milfoil growth in the reservoir provides many current operational benefits to Cascade, as well as recreational and ecological benefits. It also provides future drinking water quality benefits such as potentially lowering capital and operating costs of removing contaminants, including taste and odor compounds.

In 2015, Cascade updated its IAVMP with the goal of implementing plant control approaches that would result in a low density of milfoil populations. The 2015 IAVMP evaluated many means of controlling milfoil in the Lake Tapps Reservoir, including environmental manipulation, biological controls, manual controls, mechanical controls, and chemical controls. Many of these means of control were labor intensive, expensive, or unsuitable for the Lake Tapps Reservoir. Consequently, the 2015 IAVMP

recommended the application of herbicides, in combination with other aquatic plant control methods such as hand pulling, to substantially increase the efficacy of controlling milfoil in the reservoir.

⁵ The Lake Tapps Community Agreement calls for Cascade to control milfoil as required by law or to meet Cascade's operational goals.

Chemical Control

Cascade has, and continues to take, an adaptive management approach to managing aquatic plants. Since the 2010 IAVMP, Cascade has primarily managed milfoil growth with chemical treatments with success.

In 2019, after approval by Washington State, Cascade began using the herbicide florpyrauxifen-benzyl (tradename: ProcellaCOR®) in its annual treatment program. Of the herbicides available for milfoil control, ProcellaCOR® is considered Best Available Technology (BAT), with a better environmental profile than other products like 2,4-D and Triclopyr. In addition, one or two pints of this product replaces between 200 and 400 pounds of 2,4-D or Triclopyr, thereby reducing the amount of herbicide required to

Cascade typically treats milfoil in two phases each summer, using boat surveys to determine areas that need treatment the most. be applied. ProcellaCOR® also has one of the fastest uptake times of any available aquatic herbicide, making it more effective in high water-exchange environments like the Lake Tapps Reservoir.

For typical treatments, Cascade and its limnologist conduct a boat survey late in the previous treatment year (September or October) and then again in the spring of the upcoming treatment year (May) to identify the areas to be treated in the first round of treatment

(late June to mid-July). Timing of the first treatment is a balancing act between treating as early as possible for the recreation season yet waiting long enough to be able to determine needed treatment areas by boat survey. In late July, Cascade conducts another boat survey to determine which areas to treat in the second round (usually mid- to late August). Complaints from residents about milfoil growth also strongly factor into the location of treatment areas. **Figure 8** illustrates ProcellaCOR® treatment areas for the years 2022 through 2024.

Cascade conducted a pilot study in 2018 on controlling milfoil with dryland herbicide treatments and found it ineffective. In February 2018, four plots were treated with products registered for aquatic use to control milfoil, including: fluridone (tradename Sonar Genesis) + imazamox (tradename Clearcast) and triclopyr (tradename Renovate3). During the May 2018 survey, milfoil was observed in the general area and a visual assessment by divers showed the plot areas were not substantially different than the surrounding untreated area.

Milfoil

Other Control Methods

In addition to chemical treatment, over the years Cascade has employed and considered several other methods of milfoil control, as described below.

Manual Control Methods

Bottom barriers (pilot study). In January 2018, during the reservoir drawdown, burlap bottom barriers were installed over a 1.5-acre channel on the south side of Tapps Island. One layer of barrier was placed alongside a double layer of barrier, both secured by rocks. In July 2018, divers surveyed the area and found sediment covering the barriers from 0.5 to 6.0 inches. Fragments of milfoil were also observed growing on 40% to 50% of the barrier. They noted no observable difference between plant growth on the single or double layered barrier. Based on the rapid deposition of sediment and growth of milfoil within six months of installing the bottom barrier, Cascade determined this treatment method was not successful in controlling milfoil in the Lake Tapps Reservoir.

Diver hand pulling. Cascade used divers to hand pull milfoil for five years: 2013, 2014, 2016, 2017, and 2018. Diver hand pulling was very labor-intensive and expensive when compared to chemically treating milfoil. Based on this, Cascade ceased using divers in 2018.

Dense mat of milfoil growing in the Lake Tapps Reservoir.

Location of ProcellaCOR® treatments between 2022 and 2024.

Environmental Manipulation

Water level drawdown. As noted earlier, Cascade draws the water level down each winter for dike safety and maintenance projects. Cascade has not used the drawdown to control milfoil because to effectively do so requires freezing temperatures for at least two continuous weeks, with no precipitation.

Education and Awareness

Cascade's website. Cascade has an informative webpage on milfoil that includes photos, descriptions, options for homeowners to control milfoil, and information on Cascade's programs: <u>https://cascadewater.org/lake-tapps/milfoil/.</u>

Social media. Cascade has a Facebook page where it posts information on the milfoil treatment program and the annual meetings.

Community meetings. Cascade holds annual meetings at the Lake Tapps Reservoir where information about the milfoil treatment program is presented. Cascade also provides information to residents on the spread and prevention of invasive aquatic plant species' establishment in the reservoir, and on available, effective control options for milfoil they can individually implement near their shorelines to complement Cascade's treatment program.

Signage. Cascade supports public boat launch signage regarding milfoil.

TappsWise **Program.** Nutrients from failing septic tanks, fertilizers, and stormwater runoff feed vegetation in the reservoir and can result in excessive growth of plants, algae, reduced water clarity, and stress on fish and wildlife. Cascade has partnered with the Tacoma-Pierce County Health Department since 2017 to improve water quality in the Lake Tapps Reservoir with the *TappsWise* program. This program offers workshops, site visits, and other education for homeowners around the reservoir.

A summary of all control methods evaluated in the 2015 IAVMP can be found in Appendix B.

Aquatic Plant Control Alternatives and Control Strategy

In 2023, Cascade adopted a formal Drinking Water Quality Policy Framework (Policy Framework), which outlined a process to evaluate potential water quality programs, projects, policies, and other

actions. Since the Lake Tapps Reservoir will not be developed for municipal supply for several decades, the Policy Framework guides Cascade's decision-making on which water quality actions to implement, when to implement them, and how much to invest.

Cascade applied its Policy Framework to the milfoil program to first assess whether this continues to be the preferred strategy. The assessment indicated that the benefits of controlling milfoil Cascade's Drinking Water Quality Policy Framework Assessment indicates that the benefits of controlling milfoil to protect water quality continue to outweigh the costs.

to protect water quality in the Lake Tapps Reservoir continues to outweigh the costs. The second part of the Policy Framework evaluated the options to control milfoil. As described earlier, based on prior evaluations, Cascade determined chemical control is the most cost-effective means of control. More detailed information on the application of the Policy Framework can be found in **Appendix C**.

Preferred Milfoil Control Method

Use of ProcellaCOR® in the Lake Tapps Reservoir has been successful, as illustrated by the fact that only a few areas have required retreatment in the three years following treatment and is currently Cascade's preferred control method.

Cascade has spent nearly \$2 million for milfoil treatment to date (**Figure 9**). The amount of treatment varies from year to year as shown in the graph below. Over the past three years, the annual cost has averaged \$159,000. A comparable amount has been approved by Cascade's Board of Directors for 2025-2027.

Cascade's preferred method of treatment for milfoil is ProcellaCOR®, which is considered Best Available Technology, has a better environmental profile than other products, requires less product, and has a fast uptake time, making it more effective in high-water exchange environments such as the Lake Tapps Reservoir.

Note: No treatments occurred in 2015 due to a maintenance drawdown.

Figure 9

Annual treatment costs of Eurasian watermilfoil in the Lake Tapps Reservoir for the years 2010 through 2024

Cascade has an adaptive management strategy for controlling aquatic plants, and it has shown its ability to be nimble and adaptable to changing conditions. An example is the addition of a new component to the annual treatment program in response to community feedback. At the 2022 Lake Tapps Reservoir community meeting, residents offered to pay for treatment beyond Cascade's planned treatment areas. The following year and again in 2024, Cascade conducted a pilot project that allowed HOAs and individual homeowners to pay Cascade's contractor for treatment (through Cascade's permit) beyond Cascade's planned treatment areas. Although participation was low during the pilots, Cascade feels this offers a great benefit to the homeowners and HOAs, and Cascade is offering this as an option to the community on a permanent basis. Cascade will continue to be adaptable and strive to stay on top of the latest technologies, and Cascade remains open to better options as they become available.

SEPA Review and Public Involvement

Cascade has overwhelming support from the community for its milfoil management program, as demonstrated by endorsements from many homeowners at well-attended annual public meetings. Cascade's public outreach will continue with its annual community meetings, informational webpage and social media, public boat ramp signage, and its partnership with the Tacoma-Pierce County Health Department *TappsWise* program to improve water quality.

A State Environmental Policy Act (SEPA) Review was conducted on this Lake Tapps Reservoir IAVMP. The completed plan was sent to Ecology with a completed SEPA Plan Elements for review and comment, initiating a fourteen-day comment period. No comments were received during the comment period. The Determination of Non-significance was issued on December 18, 2024.

Monitoring, Watchlist, and Evaluation

Reservoir-wide surveys are a specific method for early detection of other non-native invasive aquatic plants. The recommended frequency for reservoir-wide surveys is every three years. The reservoir-wide plant surveys can be done in conjunction with the smaller scale annual plant treatment surveys. Community input and identification of potential new infestations of aquatic plants will also help guide the frequency of the more in-depth reservoir-wide surveys.

In 2023-2024, Cascade conducted a reservoir-wide macrophyte survey (**Appendix A**), and this information will assist in developing the chemical treatment strategy for the following years. The survey also identified plants other than milfoil, including native plants, that have, or may become, a nuisance and may require treatment. In total, 18 species of aquatic plant species were identified at 412 points sampled

Reservoir-wide surveys are an important method for early detection of non-native plants that may require a rapid treatment response to reduce future control costs due to the establishment of unwanted species. during early September 2023 and late August 2024, including observations of shoreline/emergent species. **Table 1** summarizes the species observed, listed in order of frequency of occurrence from greatest to least. Milfoil was present at 14.6% of the sample points scattered throughout the survey area. It should be noted that much of the milfoil found in the first half of the reservoir-wide survey in 2023 was treated in 2024.

In addition to evaluating management efforts, the purpose of the reservoir-wide survey is to provide early detection of other non-native aquatic plants. Based on information from sources such as the Washington State Noxious Weed Board, Pierce County Noxious Weed Control Board, Washington Department of Agriculture, Washington Department of Ecology, King County, and personal peer communications, a "watch list" of species was developed to alert staff, homeowners, and contractors about what plants to look for such that rapid response measures can be implemented.

The science of invasion biology emphasizes the importance of early detection and rapid response (EDRR) and relies heavily on prevention as a means to reduce future control costs after an unwanted species becomes established. The Invasion Curve (**Figure 10**) is widely used to illustrate that prevention is the most efficient and least costly method of combating invasive species.

Cascade applied its Drinking Water Quality Policy Framework to the concept of conducting reservoirwide surveys on a regular basis. The evaluation determined the benefits of reservoir-wide surveys outweigh the costs, assuming a frequency of every three years. If, during reservoir-wide surveys, Cascade identifies non-native or nuisance native plants that could become problematic, it will apply its Policy Framework prior to treatment or other actions.

I ABLE 1			
AQUATIC PLANT SPECIES FREQUENCY OF OCCURRENCE IN THE LAKE TAPPS RESERVOIR DURING 2023 - 2024			
RESERVOIR-WIDE SURVEY			

.

Species Common Name		Status	Frequency of Occurrence	
Nitella sp ¹	stonewort	native	42.7%	
Potamogeton nodosus/epihydrus	long-leaved/ribbon-leaved pondweed	native	37.9%	
Najas guadalupensis	waternymph	native	36.2%	
Elodea canadensis	Canadian waterweed	native	23.8%	
Vallisneria americana	wild celery	non-native	21.1%	
Myriophyllum spicatum	Eurasian watermilfoil	non-native	14.6%	
Chara sp. ²	muskgrass	native	7.5%	
Potamogeton pusillus/foliosus ¹	slender pondweed/leafy pondweed	native	3.6%	
Potamogeton richardsonii	Richardson's pondweed	native	2.7%	
Potamogeton amplifolius	large leaf pondweed	native	2.0%	
Potamogeton gramineus	variableleaf pondweed	native	1.9%	
Nuphar polysepala	yellow pond lily	native	1.2%	
Nymphaea odorata	fragrant water lily	non-native	1.2%	
Ceratophyllum demersum	hornwort	native	0.5%	
Potamogeton natans	floating leaf pondweed	native	0.5%	
Eleocharis acicularis	needle spikerush	native	0.2%	
Iris pseudacorus ³	yellowflag iris	non-native	0.2%	
Potamogeton praelongus	whitestem pondweed	native	0.2%	
Site with no plants			12.1%

GENERALISED INVASION CURVE SHOWING ACTIONS APPROPRIATE TO EACH STAGE

Source: Department of Primary Industries, Victoria.

Figure 10

The generalized species invasion curve, adapted from Harvey and Mazzotti (2014) and Haubrock et al. (2022). Labels at the top refer to the stages of the invasion process (the invasion stage is divided into low, medium, and high level). Bold labels refer to management actions appropriate at each stage of invasion. White boxes below the graph indicate terms used to refer to alien species within each invasion stage. Economic return values listed at the bottom indicate the amount of money that is returned based on the money invested at each invasion stage, adapted from Victorian Government (2010) and Reid et al. (2021).

A "watch list" of potential non-native aquatic plants, as well as potentially nuisance native aquatic plants, will assist Cascade, its contractors, and lake residents to identify new species in between recommended reservoir-wide surveys. **Table 2** summarizes aquatic plant species that should be considered for the "watch list" (descriptions are taken from resources cited above).

Common Name	Scientific Name	Weed Class ^{a,b,c}	Known Lake Occurrences in WA ^d
Brazilian elodea	Egeria densa	В	Battle Ground Lake (Clark Co.), Big Lake (Skagit Co.), Black Lake (Pacific Co.)
Curlyleaf pondweed	Potamogeton crispus	С	Isolated and very sparse observations in the Lake Tapps Reservoir; noted as wide and patchy distribution in nearby Spanaway Lake
Delta arrowhead	Sagittaria platyphylla	Quarantine list	Deep Lake (Thurston Co.)
Fanwort	Cabomba caroliniana	В	Solo Slough (Cowlitz Co.), Willow Grove Slough (Cowlitz Co.)
Floating primrose-willow	Ludwigia peploides	A	Occurrences of Ludwigia sp. in Battle Ground Lake, Haven Lake (Mason Co.), Solo Slough
Flowering rush	Butomus umbellatus	A	Boundary and Box Canyon Reservoirs (Pend Oreille Co.), Chambers Lake (Pierce Co.), Silver Lake (Whatcom Co.)
Grass-leaved arrowhead	Sagittaria graminea	В	Echo Lake, Lake Loma, Lake Roesiger (Snohomish Co.)
Hydrilla	Hydrilla verticillata	А	Previously in Lake Lucerne and Pipe Lake (King Co.)
Parrotfeather	Myriophyllum aquaticum	В	Buena Creek (Yakima Co.), Chehalis River (Grays Harbor Co. and Lewis Co.)
South American sponge	Limnobium laevigatum	A	Canal on Long Beach Peninsula (Pacific Co.)
Variable-leaf milfoil	Myriophyllum heterophyllum	A	Blue Lake (Thurston Co.), Clear Lake (Pierce Co.), Clear Lake (Thurston Co.)

 TABLE 2

 Aquatic Plant "Watch List" for the Lake Tapps Reservoir

NOTES:

a. Class A noxious weeds are non-native species whose distribution in Washington State is still limited. Eradication is the highest priority, and is required by law. It is prohibited to transport, buy, sell, offer for sale, or distribute plants or plant parts of quarantined species into or within the state of Washington or to sell, offer for sale, or distribute seed packets of seed, flower seed blends, or wildflower mixes of quarantined species into or within the state of Washington (WAC 16-752).

b. Class B noxious weeds are nonnative species whose distribution is limited to portions of Washington State.

c. Class C noxious weeds are widespread in Washington or are of special interest to the agricultural industry.

d. Washington Department of Ecology. Lakes Environmental Data. Available at: https://apps.ecology.wa.gov/lakes/. This dataset does not fully address noxious aquatic weeds in rivers.

As previously mentioned, at least three other non-native aquatic plants are known to occur in the Lake Tapps Reservoir. Wild celery is the most common, though generally limited in distribution, far less abundant than milfoil, and, while non-native, is not considered a noxious weed. Yellow flag iris, a Class C noxious weed, is limited to shorelines and is unlikely viewed as problematic to most homeowners. Like milfoil, yellow flag iris is non-regulated in Pierce County. Two instances of previously unreported fragrant waterlily were observed during the reservoir-wide survey, emphasizing the importance of these surveys. Fragrant waterlily is also a Class C noxious weed unregulated in Pierce County. Left unchecked, this species has great potential to spread across shallow backwater areas of the reservoir.

Conclusions

The Lake Tapps Reservoir is an important resource for Cascade's members, the Lake Tapps Reservoir community, partner agencies, and other stakeholders. Protecting the water quality of the reservoir provides numerous benefits today, including operational benefits for Cascade, recreational benefits for the community, and habitat for fish and wildlife. Preventing eutrophication of the reservoir is also critical for Cascade's future use as a source of drinking water, as this can reduce treatment costs and service disruptions.

Since milfoil is by far the most problematic aquatic plant in the reservoir, continued management to prevent overgrowth is key to maintaining high water quality. Based on prior experiences and evaluations of various control measures, continued chemical treatment, and specifically the use of ProcellaCOR®, is Cascade's preferred strategy.

In addition to controlling milfoil, Cascade aims to minimize or prevent overgrowth of other non-native plants (as well as over-production of nuisance native species) that are not currently prevalent in the Lake Tapps Reservoir. To achieve this, Cascade plans to conduct reservoir-wide surveys to identify and manage these issues before they become problematic.

As it has in the past, Cascade will continue to take an adaptive strategy to managing nuisance aquatic plants in the Lake Tapps Reservoir. It will strive to stay on top of the latest technologies and remain open to better options as they become available. Cascade will also continue to work with its regulators, partner agencies, and the Lake Tapps Reservoir community to maintain the reservoir's water quality for today and tomorrow.

Appendix B 2015 IAVMP Evaluation of Milfoil Control Measures

Table B-1 summarizes the numerous milfoil control measures that were evaluated in Cascade's 2015 IAVMP.

Category	Control Measure	Advantages	Disadvantages
Environmental manipulation	Water control level (winter drawdown) – exposes plant stems to freezing and drying conditions.	Can be relatively inexpensive.	The temperate climate and precipitation in the northwest is less effective than in regions with lower temperatures and less precipitation.
Biological control (use of natural enemies to reduce milfoil's biomass)	Grass carp – consumes aquatic weeds.	Proper use can achieve long- term reductions in nuisance growth of vegetation.	Grass carp has exhibited a conspicuous lack of preference for milfoil.
	Watermilfoil weevil – feeds on aquatic plants.	Used in an integrated approach with other control techniques, can stress target plants, making them more susceptible to other control methods.	Very costly and no documented declines in milfoil in Washington can be attributed to watermilfoil weevil.
Manual control - most appropriate for small, low plant density	Hand-pulling – removes rooted, submerged plants with divers.	Results in immediate removal of milfoil.	Highly labor intensive and costly; not appropriate for large, high plant density treatments.
treatments.	Hand cutting – cuts plants with tools/devices below the water surface but usually does not remove roots.	Results in immediate removal of milfoil.	Highly labor intensive and does not result in long-term growth reductions because entire plant is not removed.
	Raking – tears plants from the sediment, breaking some plants off and removing some roots.	Results in immediate removal of milfoil.	Highly labor intensive; cleared plants may regrow, resulting in needing to rake several times during the summer.
	Bottom barrier – applies barrier material over the lake bottom to prevent plants from growing.	Easily applied to small, confined areas and does not result in significant production of plant fragments.	Installation can be labor intensive; costly materials with limited durability; periodic maintenance required; barriers are rapidly covered by sediment loading.
Mechanical control	Mechanical harvesting – involves large machines that cut aquatic plants then collect fragments by a conveyor belt system for disposal.	Results in immediate removal of milfoil and creates open spaces of water.	Very costly and only removes upper stem material; regrowth typically occurs within 30 to 60 days.
	Diver-assisted suction (diver dredging) – uses hoses that are attached to small dredges to suck up plant material.	Effectively removes milfoil around docks and other areas that are difficult to reach by large equipment.	Highly labor intensive and costly; not suitable for large areas.
	Hydraulic (suction) dredging – removes littoral sediments and associated rooted aquatic plants using hydraulic dredging equipment.	Removes entire plants, thus minimizing regrowth; can be used in larger areas than diver-assisted suction.	Very costly and highly disruptive to the local environment; permitting, transport, and proper disposal can be difficult.
	Rotovation – uses highly specialized large aquatic rototillers to uproot entire plants from the sediment, then uses a rake or mechanical harvester to remove the plants.	Removes entire plants, thus minimizing regrowth.	Very costly, labor intensive, equipment difficult to maneuver particularly with obstacles in the way (tree stumps and docks).

 TABLE B-1

 AQUATIC PLANT CONTROL MEASURES EVALUATED IN THE 2015 IAVMP

This page intentionally left blank

Appendix C Cascade's Drinking Water Quality Policy Framework

In 2023, Cascade adopted a formal Drinking Water Quality Policy Framework (Policy Framework), a process to evaluate potential water quality programs, projects, policies, and other actions. Since the Lake Tapps Reservoir will not be developed for municipal supply for several decades, the Policy Framework guides Cascade's decision-making on which water quality actions to implement, when to implement them, and how much to invest.

The Policy Framework is composed of two parts: policy drivers and criteria. The policy drivers answer the question, "What's the purpose of the water quality action?". Once the policy drivers are identified, each proposed action is evaluated against a set of criteria. If a proposed action is determined to be viable vis-à-vis the Policy Framework, the final step is to evaluate it against alternative solutions.

Recommendation 1: Continue Milfoil Chemical Treatment

The Policy Framework evaluated whether controlling milfoil continues to be a good investment for Cascade, particularly with respect to protecting water quality as a source of future drinking water. It also evaluated which control method is most cost effective.

Ро	licy Drivers	Assessment (Milfoil Treatment)
1.	Future Treatment Plant Requirements for Drinking Water. Improvements, programs, policies, or other actions implemented by Cascade which are likely to reduce capital and/or operating costs for future drinking water treatment by improving raw water quality. Evaluation will consider known or anticipated federal or state regulatory treatment requirements for drinking water, emerging drinking water quality issues, or water quality expectations for introducing Lake Tapps water supplies to regional systems not owned by Cascade.	Protecting raw water quality could reduce future treatment capital and/or operating costs of removing contaminants, including taste and odor compounds, and reduce the risk of service disruptions (e.g. clogged filters due to algae).
2.	 Regulatory or Contract Water Quality or Lake Management Obligations. Improvements, programs, policies, or other actions necessary to meet: a) Minimum requirements of regulatory agencies for owning, managing, and operating a lake and a surface water system to be used for drinking water supplies. b) Obligations under current and future water rights issued by the State. c) Requirements of agreements or inherited obligations as part of the acquisition of the Lake Tapps project. Includes agreements with Puget Sound Energy, the Tribes, Lake Tapps homeowners, property deeds, and agreements acquired from PSE at the time of ownership transfer. d) County and City regulatory obligations as a property owner. e) Agreements executed by Cascade since the purchase of the Lake Tapps system. 	
3.	Cascade's Other Operational (Non-Treatment) Needs. Improvements, programs, policies, or other actions that are needed for Cascade to cost-effectively and efficiently operate and	Preventing overgrowth of milfoil allows Cascade to easily navigate the reservoir to inspect dikes and

Policy Drivers. Treating milfoil is driven by the following three policy drivers (#1, 3, and 6):

P	olicy Drivers	Asses	ssment (Milfoil Treatment)
	maintain the water supply assets of the White River-Lake Tapps Reservoir system.		perform other maintenance work. It also prevents inlets from getting clogged.
4.	 Responsibilities of Others that Impact Water Quality. Working with the State, County, Cities, and property owners to implement policies, regulations, programs, or practices that benefit the Lake Tapps system water quality. This may include, but not be limited to the following: a) Working with other agencies in the implementation of their regulatory obligations. b) Working with other agencies in the development of regulations and policies that benefit water quality. c) Working with other agencies to develop plans and programs that benefit the unique characteristics of the Lake Tapps watershed. d) Working with property owners in assuring compliance with regulatory requirements or agreements. 		
5.	Partnerships and Funding Opportunities. Water quality benefits derived as a result of partnerships with other agencies, groups, or private parties. Water quality issues may compose all or part of such arrangements and costs and benefits for water quality elements may need to be evaluated as part of all the elements of such arrangements. Funding opportunities include grants, loans, or other financial considerations that would prioritize an improvement or program that would not otherwise be considered at that time.		
6.	Being a Good Community Steward. Programs or actions that would be considered as part of being a neighbor, good steward of resources, and presence in the community. Programs and actions would have associated tangible and measurable or intangible benefits to Cascade either short- or long-term.		Preventing overgrowth of milfoil facilitates recreational use which is extremely important to the Lake Tapps Community.

Criteria: Below is an assessment of how treating milfoil meets the Policy Framework criteria.

Cri	Criteria Assessment (Milfoil Treatment)			
	Threshold Criteria – A	II Four 1	Fhreshold Criteria Must First Be Met	
A.	Is within Cascade's Purposes (Mission) and can be implemented through its Powers or the powers of its partner agency/agencies.		Cascade's Mission is to provide safe, clean, and reliable water to our members. To fulfill our mission, we need to maintain the reliability and resiliency of the Lake Tapps Reservoir as a future source of municipal supply. Milfoil control helps protect water quality which is key to maintaining reliability and resiliency.	
В.	Meets one or more Board-adopted Strategic Plan Goals.		 Controlling milfoil meets several Strategic Goals: Asset Management Strategy 1 - Implement strategies and make investments to protect the Lake Tapps Reservoir as a future drinking water supply. Environmental Stewardship Strategy 9 - Sustainably manage Cascade's facilities, equipment, assets, and capital projects in a way that minimizes impacts on the natural environment. Regional Leadership Strategy 12 - Maintain trust and a good working relationship with Cascade's member communities and Lake Tapps partners. 	
C.	Specific drinking water quality benefits to Cascade can be identified.	V	As described under <i>Policy Drivers</i> , controlling milfoil helps protect raw water quality in the Lake Tapps Reservoir.	
D.	Cascade has staffing capacity to implement the project.		Cascade has and plans to continue to contract out milfoil treatment. This approach requires a limited amount of Cascade staff time.	
A	dditional Criteria – Proposals that ı all applicable Additional Crit	neet the eria but	Threshold Criteria must next be evaluated against do not need to meet all Additional Criteria.	
E.	Funding is available		Cascade's five-year contract with a treatment contractor was approved by Cascade's Board and has the following budgeted amounts remaining: • 2025 - \$160,000 • 2026 - \$165,000 • 2027 - \$165,000	
F.	Project is cost-beneficial (benefits exceed costs over the project's life).	Unable to determine NPV at this time	One of the main benefits of controlling milfoil is protecting raw water quality so future treatment plant capital and operating costs are reduced. The net present value (NPV) was not calculated because the benefits (future avoided costs) cannot be reasonably quantified at this time.	
G.	Ease of implementation.	\checkmark	Cascade has contracted out chemically treating milfoil since 2010. The level of effort for this program has been low.	

Cri	teria	Assessment (Milfoil Treatment)		
H.	Reduces Cascade's risk (e.g. legal, regulatory, operational, financial, etc.) or still results in benefits if risk does not materialize.		Preventing overgrowth of milfoil reduces operational problems and risk for Cascade, such as avoiding clogged inlets and impeding crews' ability to navigate the reservoir to inspect dikes and perform other work.	
I.	Maintains or enhances Cascade's relationships with key stakeholders (e.g. regulators, Tribes, community, other agencies).		The Lake Tapps Reservoir community consistently indicates its appreciation of Cascade's milfoil treatment program.	
J.	Maintains or improves public trust (e.g. consumer confidence).		As noted above, the Lake Tapps Reservoir community appreciates Cascade's effort to control milfoil, which in turn generates trust. In addition, by protecting the raw water quality, Cascade should increase consumer confidence when the reservoir becomes a source of drinking water supply.	

Alternative Solutions. The alternative to controlling milfoil is do nothing – do not control milfoil. As described earlier in this Plan, overgrowth of milfoil can lead to a degradation of water quality in the Lake Tapps Reservoir. For this reason, Cascade did not further consider this alternative. By extension, it is also important to manage other invasive aquatic vegetation to maintain the water quality of the reservoir.

Alternative Treatment Solutions. As described in Appendix B, in its 2015 IAVMP, Cascade evaluated numerous other options to control milfoil and found chemical treatment is currently the most cost-effective option. In addition, as described in the *Past Management Practices* section, Cascade has employed a variety of control strategies validating the effectiveness of chemical treatment.

Preferred Strategy. Cascade's preferred strategy is to continue to control milfoil with chemical treatment, specifically using ProcellaCOR®. Cascade's practice is to recommend the amount invested in a given year, and that amount (or different amount) is approved by its Board of Directors. This practice is expected to continue in the future. While ProcellaCOR® has been the most cost-effective method to date, Cascade will continue to explore other chemical products and other control methods.

Recommendation 2: Conduct Reservoir-Wide Surveys Every Three Years

Policy Drivers. Conducting a reservoir survey as a means of monitoring the Lake Tapps Reservoir will likely result in Cascade taking action to: 1) eradicate regulated non-native species; and 2) prevent or control the overgrowth of nuisance non-native and native aquatic plants. As such, a reservoir survey is driven by the following four policy drivers (#1, 2, 3, and 6).

Ро	licy Drivers	Asses	ssment (Reservoir Survey)
1.	Future Treatment Plant Requirements for Drinking Water. Improvements, programs, policies, or other actions implemented by Cascade which are likely to reduce capital and/or operating costs for future drinking water treatment by improving raw water quality. Evaluation will consider known or anticipated federal or state regulatory treatment requirements for drinking water, emerging drinking water quality issues, or water quality expectations for introducing Lake Tapps water supplies to regional systems not owned by Cascade.		Identifying and preventing overgrowth of other aquatic plants, both non-native and native, protects raw water quality and could reduce future treatment capital and/or operating costs (as described under Recommendation 1).
2.	 Regulatory or Contract Water Quality or Lake Management Obligations. Improvements, programs, policies, or other actions necessary to meet: a) Minimum requirements of regulatory agencies for owning, managing, and operating a lake and a surface water system to be used for drinking water supplies. b) Obligations under current and future water rights issued by the State. c) Requirements of agreements or inherited obligations as part of the acquisition of the Lake Tapps project. Includes agreements with Puget Sound Energy, the Tribes, Lake Tapps homeowners, property deeds, and agreements acquired from PSE at the time of ownership transfer. d) County and City regulatory obligations as a property owner. e) Agreements executed by Cascade since the purchase of the Lake Tapps system. 		Identifying and eradicating regulated non-native plants and species enables Cascade to meet Piece County noxious weeds regulations and Washington State invasive species regulations.
3.	Cascade's Other Operational (Non-Treatment) Needs. Improvements, programs, policies, or other actions that are needed for Cascade to cost-effectively and efficiently operate and maintain the water supply assets of the White River-Lake Tapps Reservoir system.		Identifying and preventing overgrowth of aquatic plants and species allows Cascade to easily navigate the reservoir to inspect dikes and perform other maintenance work. It also prevents inlets from getting clogged.
4.	 Responsibilities of Others that Impact Water Quality. Working with the State, County, Cities, and property owners to implement policies, regulations, programs, or practices that benefit the Lake Tapps system water quality. This may include, but not be limited to the following: a) Working with other agencies in the implementation of their regulatory obligations. b) Working with other agencies in the development of regulations and policies that benefit water quality. c) Working with other agencies to develop plans and programs that benefit the unique characteristics of the Lake Tapps watershed. d) Working with property owners in assuring compliance with regulatory requirements or agreements. 		

Ро	licy Drivers	Assessment (Reservoir Survey)	
5.	Partnerships and Funding Opportunities. Water quality benefits derived as a result of partnerships with other agencies, groups, or private parties. Water quality issues may compose all or part of such arrangements and costs and benefits for water quality elements may need to be evaluated as part of all the elements of such arrangements. Funding opportunities include grants, loans, or other financial considerations that would prioritize an improvement or program that would not otherwise be considered at that time.		
6.	Being a Good Community Steward. Programs or actions that would be considered as part of being a neighbor, good steward of resources, and presence in the community. Programs and actions would have associated tangible and measurable or intangible benefits to Cascade either short or long term.		Identifying and preventing overgrowth of aquatic plants and species facilitates recreational use and is extremely important to the Lake Tapps Community.

Criteria. Below is an assessment of how conducting lake surveys meets the Policy Framework criteria. As above, the assumption is a lake survey will lead to Cascade taking proactive action to address regulated non-native species and other nuisance plants.

Criteria Ass			Assessment (Reservoir Survey)			
	Threshold Criteria – All Four Threshold Criteria Must First Be Met					
А.	Is within Cascade's Purposes (Mission) and can be implemented through its Powers or the powers of its partner agency/agencies.		Cascade's Mission is to provide safe, clean, and reliable water to our members. To fulfill our mission, we need to maintain the reliability and resiliency of the Lake Tapps Reservoir as a future source of municipal supply. Proactively identifying and controlling the overgrowth of aquatic plants and species helps protect water quality which is key to maintaining reliability and resiliency.			
В.	Meets one or more Board-adopted Strategic Plan Goals.		 Proactively identifying and controlling the overgrowth of aquatic plants and species meets several Strategic Goals: Asset Management Strategy 1 - Implement strategies and make investments to protect the Lake Tapps Reservoir as a future drinking water supply. Environmental Stewardship Strategy 9 - Sustainably manage Cascade's facilities, equipment, assets, and capital projects in a way that minimizes impacts on the natural environment. Regional Leadership Strategy 12 - Maintain trust and a good working relationship with Cascade's member communities and Lake Tapps partners. 			
C.	Specific drinking water quality benefits to Cascade can be identified.		As described under <i>Policy Drivers</i> , identifying and controlling the overgrowth of aquatic plants and species helps protect raw water quality in the Lake Tapps Reservoir.			
D.	Cascade has staffing capacity to implement the project.	\checkmark	Cascade contracted out a reservoir survey in the past year. This approach requires a limited amount of Cascade staff time.			

Cri	teria	Assessr	nent (Reservoir Survey)
A	dditional Criteria – Proposals that meet Additional Criteria	the Thres but do not	hold Criteria must next be evaluated against all applicable need to meet all Additional Criteria.
E.	Funding is available		The cost of the 2023-2024 reservoir survey was less than \$50K This is a relatively small amount of funding and can be included in the 2027 budget (or later budget) when the reservoir survey is next needed.
F.	Project is cost-beneficial (benefits exceed costs over the project's life).	Unable to determine NPV at this time	One of the main benefits of controlling overgrowth of aquatic plants and species is protecting raw water quality so future treatment plant capital and operating costs are reduced. The net present value (NPV) was not calculated because the benefits (future avoided costs) cannot be reasonably quantified at this time.
G.	Ease of implementation.	\checkmark	As noted above, Cascade recently contracted out a reservoir- wide survey, and the level of effort for the work was low.
H.	Reduces Cascade's risk (e.g. legal, regulatory, operational, financial, etc.) or still results in benefits if risk does not materialize.	V	Proactively identifying and controlling the overgrowth of aquatic plants and species reduces operational problems and risk for Cascade, such as avoiding clogged inlets and impeding crews' ability to navigate the reservoir to inspect dikes and perform other work.
I.	Maintains or enhances Cascade's relationships with key stakeholders (e.g. regulators, Tribes, community, other agencies).		Proactively identifying and eradicating regulated aquatic plants and species will maintain Cascade's good relationship with its regulators.
J.	Maintains or improves public trust (e.g. consumer confidence).		The Lake Tapps Reservoir community appreciates Cascade's effort to control milfoil, which in turn generates trust. Identifying and controlling overgrowth of other nuisance aquatic plants should further enhance that trust. In addition, by protecting the raw water quality, Cascade should increase consumer confidence when the reservoir becomes a source of drinking water supply.

Alternative Solutions. Two alternatives to conducting a reservoir-wide survey every three years were evaluated and summarized below.

Option	Pros	Cons
Do not conduct lake surveys	Eliminates costs of the survey (\$50K every three years in 2024 dollars)	Cascade will need to rely on homeowners and its own limited boat surveys to identify the presence of regulated species and/or overgrowth of nuisance non-native or native plants.
Conduct lake surveys less frequently, such as every five years	Reduces costs of the survey (\$50K every six years in 2024 dollars)	Identifying the presence of regulated species and/or overgrowth of nuisance non-native or native plants could be delayed, likely resulting in more treatment costs.

Preferred Strategy. Given the relatively small amount of funding to conduct the reservoir surveys, the recommendation is to perform the surveys, preferably every three years. However, Cascade will reevaluate the effectiveness and frequency of the surveys no later than in its next IAVMP, due in 2035.

Appendix D ProcellaCOR® Safety Data Sheet

Conforms to HazCom 2012/United States

SAFETY DATA SHEET

Section 1. Identification

GHS product Identifier	: ProcellaCOR EC
Recommended use of the	e chemical and restrictions on use
Identified uses	: End use herbicide product
EPA Registration No.	: 67690-80
Supplier's details	: SePRO Corporation 11550 North Meridian Street Suite 600 Carmel, IN 46032 U.S.A. Tel: 317-580-8282 Toll free: 1-800-419-7779 Fax: 317-580-8290 Monday - Friday, 8am to 5pm <u>E.S.T.</u> www.sepro.com
Emergency telephone number (with hours of operation)	INFOTRAC - 24-hour service 1-800-535-5053

The following recommendations for exposure controls and personal protection are intended for the manufacture, formulation and packaging of this product. For applications and/or use, consult the product label. The label directions supersede the text of this Safety Data Sheet for application and/or use.

Section 2. Hazards identification

Hazard classification:

This material is not hazardous under the criteria of the Federal OSHA Hazard Communication Standard 29CFR 1910.1200.

Other hazards: No data available.

Section 3. Composition/information on ingredients

Chemical nature:

This product is a mixture.

Component	CASRN	Concentration
Florpyrauxifen-benzyl	1390661-72-9	2.7%
Ethylhexanol	104-76-7	2.1%
Methanol	67-56-1	0.9%
Balance	Not available	94.3%

Section 4. First aid measures

Description of first aid measures

General advice:	If potential for exposure exists refer to Section 8 for specific personal protective equipment.
Inhalation:	Move person to fresh air. If person is not breathing, call an emergency responder or ambulance, then give artificial respiration; if by mouth to mouth use rescuer protection (pocket mask etc). Call a poison control center or doctor for treatment advice.
Skin contact:	Take off contaminated clothing. Rinse skin immediately with plenty of water for 15-20 minutes. Call a poison control center or doctor for treatment advice.
Eye contact:	Hold eyes open and rinse slowly and gently with water for 15-20 minutes. Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eyes. Call a poison control center or doctor for treatment advice.
Ingestion:	No emergency medical treatment necessary.
Most important symptoms and effects, both acute and delayed:	Aside from the information found under Description of first aid measures (above) and Indication of immediate medical attention and special treatment needed (below), any additional important symptoms and effects are described in Section 11: Toxicology Information.
Indication of any immediate	e medical attention and special treatment needed
Notes to physician:	No specific antidote. Treatment of exposure should be directed at the control of symptoms and the clinical condition of the patient. Have the Safety Data Sheet, and if available, the product container or label with you when calling a poison control center or doctor, or going for treatment.

Section 5. Fire-fighting measures

 Suitable extinguishing media:
 Water fog or fine spray. Dry chemical fire extinguishers. Carbon dioxide fire extinguishers. Foam. Do not use direct water stream. May spread fire. General purpose synthetic foams (including AFFF type) or protein foams are preferred if available. Alcohol resistant foams (ATC type) may function.

 Unsuitable extinguishing media:
 No data available

 Special hazards arising from the substance or mixture

 Hazardous combustion products:
 During a fire, smoke may contain the original material in addition to combustion products of varying composition which may be toxic and/or irritating. Combustion products may include and are not limited to: Nitrogen oxides. Hydrogen fluoride. Hydrogen chloride. Carbon

Unusual Fire and Explosion Hazards: Violent steam generation or eruption may occur upon application of direct water stream to hot liquids. Advice for firefighters

monoxide. Carbon dioxide.

Fire Fighting Procedures: Keep people away. Isolate fire and deny unnecessary entry. Consider feasibility of a controlled burn to minimize environment damage. Foam fire extinguishing system is preferred

because uncontrolled water can spread possible contamination. Do not use direct water stream. May spread fire. Burning liquids may be moved by flushing with water to protect personnel and minimize property damage. Contain fire water run-off if possible. Fire water run-off, if not contained, may cause environmental damage. Review the "Accidental Release Measures" and the "Ecological Information" sections of this SDS.

Special protective equipment for firefighters:

Wear positive-pressure self-contained breathing apparatus (SCBA) and protective fire fighting clothing (includes fire fighting helmet, coat, trousers, boots, and gloves). Avoid contact with this material during fire fighting operations. If contact is likely, change to full chemical resistant fire fighting clothing with self-contained breathing apparatus. If this is not available, wear full chemical resistant clothing with self-contained breathing apparatus and fight fire from a remote location. For protective equipment in post-fire or non-fire clean-up situations, refer to the relevant sections.

Section 6. Accidental release measures

Personal precautions, protective equipment and emergency procedures:	Isolate area. Keep unnecessary and unprotected personnel from entering the area. Refer to section 7, Handling, for additional precautionary measures. Use appropriate safety equipment. For additional information, refer to Section 8, Exposure Controls and Personal Protection.
Environmental precautions:	Spills or discharges to natural waterways are likely to kill aquatic organisms. Prevent from entering into soil, ditches, sewers, waterways and/or groundwater. See Section 12, Ecological Information.
Methods and materials for containment and cleaning up	Contain spilled material if possible. Small spills: Absorb with materials such as: Clay. Dirt. Sand. Sweep up. Collect in suitable and properly labeled containers. Large spills: Contact SePRO Corporation for clean-up assistance. See Section 13, Disposal Considerations, for additional information.

Section 7. Handling and storage

Precautions for safe handling: Keep out of reach of children. Do not swallow. Avoid contact with eyes, skin, and clothing. Avoid breathing vapor or mist. Wash thoroughly after handling. Keep container closed. Use with adequate ventilation. See Section 8, EXPOSURE CONTROLS AND PERSONAL PROTECTION.

Conditions for safe storage: Store in a dry place. Store in original container. Keep container tightly closed when not in use. Do not store near food, foodstuffs, drugs or potable water supplies.

Section 8. Exposure controls/personal protection

Control parameters:	Exposure limits are list	ted below, if they exist.	
Component	Regulation	Type of Listing	Value/Notation
Ethylexanol	Dow IHG Dow IHG	TWA TWA	2 ppm SKIN
Methanol	ACGIH	TWA	200 ppm

Section 10. Stability and reactivity

Reactivity:	No dangerous reaction known under conditions of normal use.
Chemical stability:	Thermally stable at typical use temperatures.
Possibility of hazardous reactions:	Polymerization will not occur.
Conditions to avoid:	Exposure to elevated temperatures can cause product to decompose.
Incompatible materials:	None known.
Hazardous decomposition products:	Decomposition products depend upon temperature, air supply and the presence of other materials. Decomposition products can include and are not limited to: Carbon monoxide. Carbon dioxide. Hydrogen chloride. Hydrogen fluoride. Nitrogen oxides.

Section 11. Toxicological information

Toxicological information appears in this section when such data is available.

Acute toxicity	
Acute oral toxicity	Very low toxicity if swallowed. Harmful effects not anticipated from swallowing small amounts. As product: LD50, Rat, female, > 5,000 mg/kg
Acute dermal toxicity	Prolonged skin contact is unlikely to result in absorption of harmful amounts. As product: LD50, Rat, male and female, > 5,000 mg/kg
Acute inhalation toxicity	No adverse effects are anticipated from single exposure to mist. Based on the available data, respiratory irritation was not observed. As product: LC50, Rat, male and female, 4 Hour, dust/mist, > 5.40 mg/l No deaths occurred at this concentration.
Skin corrosion/irritation	Brief contact may cause slight skin irritation with local redness.
Serious eye damage/ eye irritation	May cause slight eye irritation. Corneal injury is unlikely.
Sensitization	Did not cause allergic skin reactions when tested in guinea pigs. For respiratory sensitization: No relevant data found

Specific Target Organ Systemic Toxicity	
(Single Exposure)	Evaluation of available data suggests that this material is not an STOT-SE toxicant.
Specific Target Organ Systemic Toxicity	
(Repeated Exposure)	For the active ingredient(s): Based on available data, repeated exposures are not anticipated to cause significant adverse effects.
	For the major component(s): Based on available data, repeated exposures are not anticipated to cause significant adverse effects.
	For the minor component(s): In animals, effects have been reported on the following organs: Blood, kidney, liver, and spleen.
Carcinogenicity	For the active ingredient(s): Did not cause cancer in laboratory animals. For the major component(s): No relevant data found.
Teratogenicity	For the active ingredient(s): Did not cause birth defects or any other fetal effects in laboratory animals.
	For the major component(s): No relevant data found.
	For the minor component(s): Has caused birth defects in laboratory animals only at doses toxic to the mother. Has been toxic to the fetus in laboratory animals at doses toxic to the mother. These concentrations exceed relevant human dose levels.
Reproductive toxicity	For the active ingredient(s): In animal studies, did not interfere with reproduction. For the major component(s): In animal studies, did not interfere with reproduction. In animal studies, did not interfere with fertility.
Mutagenicity	In vitro genetic toxicity studies were negative. Animal genetic toxicity studies were negative.
Aspiration Hazard	Based on physical properties, not likely to be an aspiration hazard. No aspiration toxicity classification

Section 12. Ecological information

Ecotoxicological information appears in this section when such data is available.

Toxicity	
Acute toxicity to fish	Material is practically non-toxic to fish on an acute basis (LC50 > 100 mg/L).
	EC50, <i>Cyprinus carpio</i> (Carp), static test, 96 Hour, > 120 mg/l, OECD Test Guideline 203 or Equivalent
Acute toxicity to	
aquatic invertebrates	Material is slightly toxic to aquatic invertebrates on an acute basis (LC50/EC50 between 10 and 100 mg/L).
	EC50, Daphnia magna (Water flea), 48 Hour, 49 mg/l, OECD Test Guideline 202
Acute toxicity to	
algae/aquatic plants	Material is very highly toxic to some aquatic vascular plant species.
	ErC50, Pseudokirchneriella subcapitata (green algae), 72 Hour, > 5.4 mg/l, OECD Test
	Guideline 201 ErC50, Muriaphyllum spicatum, 14 d. 0.000919 mall
	Eroso, wyriopnynum spicatum, 14 d, 0.000315 mgn
	NOEC, Myriophyllum spicatum, 14 d, 0.0000954 mg/l

Toxicity to Above Groun Organisms	nd Material is practically non-toxic to birds on an acute basis (LD50 > 2000 mg/kg).
	oral LD50, Colinus virginianus (Bobwhite quail), > 2500mg/kg bodyweight.
	oral LD50, Apis mellifera (bees), 48 Hour, > 212.2µg/bee
	contact LD50, Apis mellifera (bees), 48 Hour, >200µg/bee
Toxicity to soil-dwelling	
organisms	LCSU, Elserna reuda (earthworms), 14 0, mortality, >2,500 mg/kg
Persistence and degradabil	ity
florpyrauxifen-benzyl	
Biodegradability:	Material is expected to biodegrade very slowly (in the environment). Fails to pass OECD/EEC tests for ready biodegradability.
Biodegradation:	14.6 %
Exposure time:	29 d
Method:	OECD Test Guideline 301B
Stability in Water (1)	2.life)
	Hydrolysis, DT50, 913 d, pH 4, Half-life Temperature 25 °C Hydrolysis, DT50, 111 d, pH 7, Half-life Temperature 25 °C Hydrolysis, DT50, 1.3 d, pH 9, Half-life Temperature 25 °C
Ethylhexanol	
Biodegradability:	Material is readily biodegradable. Passes OECD test(s) for ready biodegradability. Material is ultimately biodegradable (reaches > 70% mineralization in OECD test(s) for inherent biodegradability).

Section 13. Disposal considerations

Disposal methods: If wastes and/or containers cannot be disposed of according to the product label directions, disposal of this material must be in accordance with your local or area regulatory authorities. This information presented below only applies to the material as supplied. The identification based on characteristic(s) or listing may not apply if the material has been used or otherwise contaminated. It is the responsibility of the waste generator to determine the toxicity and physical properties of the material generated to determine the proper waste identification and disposal methods in compliance with applicable regulations. If the material as supplied becomes a waste, follow all applicable regional, national and local laws.

Section 14. Transport information

```
DOT
```

Not regulated for transport

Classification for SEA transport (IMO-IMDG):

Proper shipping name UN number	Environmentally hazardous substance, liquid, n.o.s. (Florpyrauxifen-benzyl) UN 3082
Class	9
Packing group	III
Marine pollutant	Florpyrauxifen-benzyl
Transport in bulk according to Annex I or II	Consult IMO regulations before transporting ocean bulk
of MARPOL 73/78 and the	
IBC or IGC Code	

Classification for AIR transport (IATA/ICAO):

Proper shipping name	Environmentally hazardous substance, liquid, n.o.s. (Florpyrauxifen-benzyl)

AGENDA MEMORANDUM

SUBJECT

Motion to adopt Resolution No. 2025-01 Authorizing the Chief Executive Officer to Execute Agreements with the City of Tacoma for Wholesale Water Supply.

BACKGROUND

Cascade's current contract with Seattle Public Utilities (Seattle) for drinking water is a declining block agreement for 33.3 million gallons per day (MGD) for average use and 63 MGD for peak use through 2039. Starting in 2039, the block of water begins to decline annually until reaching 5.3 MGD by 2064. This "Block Contract" ends December 31, 2063, with the exception that Cascade can continue to purchase 5.3 MGD for its Members.

Cascade also currently has a contract with Tacoma Public Utilities (Tacoma) to receive up to 8.0 MGD of water supply ("2012 Water Supply Agreement"). Cascade's annual payments to Tacoma are in excess of \$6 million; this amount drops to about \$1 million beginning in 2030 and through 2042. To date, Cascade has not requested any water under this contract.

In 2009, Cascade purchased the White River-Lake Tapps Reservoir system as a source of future drinking water supply. Cascade's *Base Case* scenario assumes the Lake Tapps Reservoir will need to be in service by 2042 to replace declining Seattle supply. The estimated cost to develop the Reservoir is about \$2 billion. Cascade needs 20 years to plan, conduct environmental review, secure permits and property rights, and design and construct the transmission pipes, treatment plant, and other facilities and assets.

Based on Seattle's, Tacoma's, and Everett's current water system plans, water supply in the region should be ample through at least 2060. Cascade's business model calls for the use of available regional water to "bridge" demand until the Lake Tapps Reservoir is developed. Given this, coupled with the 20 years needed to develop the Lake Tapps Reservoir, in July 2021, Cascade's Board of Directors directed staff to pursue two potential supply contracts with Seattle and Tacoma, with the following objectives:

- 1. A 20-year (or longer) extension of contract supply sufficient to defer development of the Lake Tapps Reservoir,
- 2. Reasonable and predictable costs,
- 3. Net economic and/or rate benefit versus developing Lake Tapps Reservoir,
- 4. Flexibility in contract term and/or quantity to allow for future variation in supply and demand,
- 5. Possible further extensions if mutually beneficial given supply/demand status, and
- 6. Possible partnership opportunities for assets of regional significance.

After more than two years of discussions, Seattle and Tacoma both offered terms that would allow Cascade to cost-effectively defer developing the Lake Tapps Reservoir. Cascade
thoroughly analyzed both proposals, presented the information at Board and committee meetings on numerous occasions, responded to questions from the Board and member staff over the course of the discussions, and received Board feedback. In addition, both Seattle and Tacoma presented their proposals directly to the Board in January 2024.

Tacoma's proposal met the objectives listed above and provided greater benefits than Seattle's, as described below.

- <u>Longer Supply Certainty</u>. Tacoma offered Cascade a 20+-year guaranteed supply of water. Seattle offered Cascade a 10-year guaranteed block extension through 2049 and two five-year conditional block extensions through 2054 and 2059, respectively.
- <u>Cost Effectiveness</u>. Tacoma's proposal provides greater financial benefit than a 10-year, 15-year, or 20-year extension with Seattle in terms of total cost (net present value), unit cost, rate increases, and debt.
- <u>Reduced Construction Risk</u>. The financial analyses included the cost to develop the Lake Tapps Reservoir for both the Tacoma and Seattle proposals. Contracting with Tacoma allows Cascade to phase development over time by building two-thirds of the transmission pipelines in the 2030s and building the remaining pipelines and the treatment plant two decades later. A 10, 15, or 20-year extension with Seattle requires building the transmission pipelines and treatment plant concurrently and within a compressed period of time, greatly increasing construction risk. A phased construction approach with Tacoma also enables Cascade to increase rates more moderately.
- Regionalism and Resiliency. Projections show the tri-county area will continue to have an ample supply of water decades into the future. The challenge is these systems are currently not connected. Cascade and Tacoma have a strong interest in partnering with each other and with other utilities to plan for the region's future today -- before a regional solution is needed. A contract with Tacoma would be a first step toward creating a regional water system in which water can move to where it is needed, similar to the electricity industry. Such a system would increase resiliency for Puget Sound water utilities. If and when the Lake Tapps Reservoir is developed, it could be an important part of the regional system. Maximizing the region's water supply and water rights can also defer the need for individual utilities to find new, expensive sources of supply to meet their customers' demand.
- <u>Flexibility</u>. Tacoma's proposal, with its longer term guaranteed supply, ability to phase construction, and opportunity to partner on a regionalized water system, also provides Cascade with flexibility. The future is uncertain, and Cascade needs to be able to adapt to changing circumstances, such as significant changes in regional supply and demand.

On May 22, 2024, via Resolution 2024-06, Cascade's Board directed staff to:

 Negotiate the terms of a water supply contract consistent with the six objectives outlined by the Board in July 2021,

- Commence drafting the contract documents with Tacoma consistent with the draft term sheet that was attached to Resolution 2024-06,
- Continue open communications with Seattle, and
- Provide regular status updates to the Board.

Since May 2024, Cascade and Tacoma staff and their respective attorneys have negotiated the terms of the new water supply contracts/agreements. The final draft contracts are attached to the attached Resolution 2025-01.

As the Cascade and Tacoma teams negotiated the terms of the new contract, they mutually agreed to several provisions that either modify or add to the provisions in the draft May 2024 term sheet. These fall into two groupings, as described below.

The first group of modifications are changes to specific terms that were outlined in the May 2024 draft term sheet. The most significant changes include the following:

- <u>Permanent Supply</u>. The draft term sheet contemplated Cascade purchasing temporary supply of 24 MGD annual average and 35 MGD peak from 2041 through 2065, with an option to purchase permanent supply of up to 12 MGD average and 17.5 MGD peak. During negotiations, Tacoma offered to provide permanent supply as a contract term rather than providing this as an option for future negotiation. Securing permanent supply provides significant benefits to Cascade's Members.
- <u>Two Separate Agreements</u>. For ease of contract development and execution, Cascade and Tacoma decided to develop two separate contracts instead of one: 1) The Agreement for the Sale of Wholesale Water ("Wholesale Agreement") for permanent supply; and 2) the Agreement for the Sale of Market-Priced Wholesale Water ("Market-Priced Agreement") for temporary supply. Many of the terms are identical in both contracts, such as conservation and planning. However, some of the terms differ, such as charges and fees. Earlier drafts of the contracts stipulated 12 MGD average and 17.5 MDG peak in each contract, for a combined supply amount of 24 MDG average and 35 MGD peak, mirroring the supply terms in the draft term sheet.
- <u>Timeframe for the Market-Priced Agreement</u>. As noted above, the draft term sheet contemplated Cascade purchasing temporary supply from 2041 through 2065. After further analysis, Cascade and Tacoma mutually agreed to change the Market-Priced Agreement end date from 2065 to 2062. Cascade's demand begins to exceed Tacoma supply in the early 2060s, and Cascade will need to have the Lake Tapps Reservoir in service by then. As such, purchasing supply beyond 2062 is not needed. Upon mutual agreement, Cascade and Tacoma can extend the timeframe.
- <u>Peak Supply for the Wholesale Agreement</u>. Alongside the decision to shorten the timeframe for the Market-Priced Agreement, Cascade and Tacoma mutually agreed to lower the peak supply (from the two contracts combined) from 35 MGD to 32.5 MGD. The Market-Priced Agreement supply remains at 17.5 MGD but the Wholesale Agreement changed to 15 MGD (2.5 MGD lower). Cascade does not need 2.5 MGD difference in the Wholesale Agreement. Furthermore, Cascade receives a financial

benefit by reducing the System Development Charge and Ready-to-Serve Charge associated with the lower amount.

• <u>Water Use Between the Two Agreements</u>. Specified amounts of water supply are available to Cascade in the two contracts. The contract provisions allow Cascade to use the lowest cost water first.

The second group of changes include adding provisions that were not considered in the May 2024 draft term sheet, including the following:

- <u>Restructured Payments</u>. As mentioned earlier, under the current 2012 Water Supply Agreement, Cascade is obligated to make payments to Tacoma through 2042, with the amount dropping significantly starting in 2030. Tacoma offered a new restructured payment schedule which includes the current payments plus the new Market-Priced Agreement and Wholesale Agreement payments. The restructured payment schedule provides Cascade with rate stability and Tacoma with cash flow stability.
- <u>Guardrails</u>. One of Cascade's and Tacoma's goals throughout the contract negotiations has been to strike a good balance between predictability and flexibility. To achieve predictability, Cascade and Tacoma mutually agreed to a number of "guardrails" to protect the Parties' interests over the next several decades.
 - <u>Financial Guardrails</u>. Examples of financial guardrails include a limit on administrative overhead charges to Cascade and a prohibition of an outside city multiplier (i.e. charging higher rates to wholesale customers outside the City of Tacoma).
 - Legal Guardrail. Examples of legal guardrails include agreement on use of standards for decision-making such as "Prudent Utility Practices" and good faith, prompt notice of water quality or contamination problems, and a clear dispute resolution process.
- <u>Management Agreements</u>. As allowed in the current Block Contract with Seattle, Cascade and Tacoma will develop Management Agreements to implement and administer the Market-Priced and Wholesale Agreements. Cascade's CEO and Tacoma Water's Superintendent will be authorized to negotiate and execute Management Agreements. Examples of these agreements include water quality monitoring protocols, shortage management coordination, a process for the five-year reviews, and revisions to allocable cost centers, assets, or expenses.
- <u>Regular Contracts Reviews</u>. Cascade and Tacoma realize emergent issues may arise after the two contracts are signed and executed, which could cause either or both Parties to request updates to one or both contracts. Given this, Cascade and Tacoma agree to meet and jointly review both contracts every five years, starting in 2029. This review process will be defined by a Management Agreement. In addition, Cascade will present, for approval of the Board, guidelines for the role of Board regarding the five-year reviews.

Throughout the contract negotiations, Tacoma has been a collaborative partner with shared goals and values. The draft contracts reflect this, and the outcomes of the contracts provide great benefit to both Cascade and Tacoma. In short, the two contracts achieve the Board's guiding principles and objectives, as earlier described. Specifically:

- Cascade will receive supply reliability through 2062,
- Cascade can cost-effectively defer development of the Lake Tapps Reservoir and can potentially further defer development if additional future supply is secured from Tacoma or other sources,
- The supply and financial terms of the contracts result in reduced cost of water over time and lower long-term rate forecasts,
- Inclusion of financial and legal guardrails help maintain Cascade's long-term interests,
- The contracts strike a good balance between certainty and flexibility, including flexibility to allow for future variation in supply and demand, and
- Connecting Cascade's system with that of Tacoma's enhances Cascade's resiliency and regional resiliency.

The attached Resolution 2025-01 requests the Board to authorize Cascade's Chief Executive Officer, in consultation with legal counsel, to finalize and execute the two contracts substantially consistent with the attached Final Draft Agreements.

PROCUREMENT PROCESS

Not applicable.

FISCAL IMPACT

Contracting with Tacoma is more cost-effective than developing the Lake Tapps Reservoir by 2042. In terms of net present value, it is an estimated savings of about \$300 million. The extended capital development schedule also reduces rate pressure and financial risk throughout the multi-decade supply development period. Finally, by reducing initial capital expenditures, new contracts with Tacoma also provide a favorable near-term rate profile. Longer-term rates are moderated by the separation of capital development into "generations" of projects, which also helps to meet generational equity objectives.

The near-term budget and rates impact of this proposed action were included in Cascade's adopted 2025-2026 operations and maintenance budget, 2025-2026 rates, and 2025-2030 capital budget, approved by the Board in September 2024.

Consistent with Cascade code, staff will embark on developing a project funding plan that considers various forms of debt and assistance, establishes a funding strategy for the initial projects, and evaluates cost and schedule risks. The funding plan will be developed in 2025 and provided to the Board for review, consideration, and ultimate adoption as the financial plan for implementation.

OPTIONS

- 1. Adopt Resolution No. 2025-01, Authorizing the Chief Executive Officer to Execute Agreements with the City of Tacoma for Wholesale Water Supply.
- 2. Do not adopt Resolution No. 2025-01 and provide alternative direction to staff.

RECOMMENDED ACTION

Adopt Resolution No. 2025-01, Authorizing the Chief Executive Officer to Execute Agreements with the City of Tacoma for Wholesale Water Supply.

ATTACHMENTS

- 1. Resolution No. 2025-01, Authorizing the Chief Executive Officer to Execute Agreements with the City of Tacoma for Wholesale Water Supply.
- 2. Final Draft of the Agreement for Market-Priced Wholesale Water Supply.¹
- 3. Final Draft of the Agreement for Wholesale Water Supply.¹

¹ Both final draft contracts will be provided prior to the Board meeting

Attachment 1

CASCADE WATER ALLIANCE RESOLUTION NO. 2025-01

A RESOLUTION OF THE BOARD OF DIRECTORS OF THE CASCADE WATER ALLIANCE, A WASHINGTON MUNICIPAL CORPORATION, AUTHORIZING THE CHIEF EXECUTIVE OFFICER TO EXECUTE AGREEMENTS WITH THE CITY OF TACOMA FOR WHOLESALE WATER SUPPLY

WHEREAS the Cascade Water Alliance ("Cascade") is a Washington municipal corporation formed under authority of the Joint Municipal Utilities Authority Act (Chapter 39.106 RCW) to provide water supply to its Members; and

WHEREAS Cascade, at the direction of the Board of Directors (Board) provided in Resolution No. 2024-06, negotiated the terms of water supply contracts with the City of Tacoma, Department of Public Works, Water Department ("Tacoma") consistent with the six objectives set by the Board: of (1) a 20-year (or longer) extension of contract supply sufficient to defer development of the Lake Tapps Reservoir; (2) at reasonable and predictable costs; (3) with net economic and/or rate benefit versus developing Lake Tapps Reservoir; (4) with flexibility in contract term and/or quantity to allow for future variation in supply and demand; (5) with possible further extensions if mutually beneficial given supply/demand status; and (6) with possible partnership opportunities for assets of regional significance; and

WHEREAS the Board now desires to authorize the Chief Executive Officer to finalize and execute two agreements between Cascade and Tacoma.

NOW, THEREFORE, BE IT RESOLVED BY THE BOARD OF DIRECTORS OF THE CASCADE WATER ALLIANCE, as follows:

Section 1. Adoption. The Board authorizes the Chief Executive Officer, in consultation with legal counsel, to finalize and execute the *AGREEMENT FOR MARKET-PRICED WHOLESALE WATER SUPPLY BETWEEN THE CITY OF TACOMA, DEPARTMENT OF PUBLIC UTILITIES, WATER DIVISION AND CASCADE WATER ALLIANCE* and the *AGREEMENT FOR WHOLESALE WATER SUPPLY BETWEEN THE CITY OF TACOMA, DEPARTMENT OF PUBLIC UTILITIES, WATER DIVISION AND CASCADE WATER ALLIANCE ALLIANCE*, substantially consistent with the attached.

<u>Section 2. Governance and Oversight.</u> In 2025, Cascade staff shall present, for approval of the Board, guidelines for the role of Board regarding the five (5) year reviews and the Management Agreements.

Section 3. Effect. This Resolution shall be in full force and effect on the date of its adoption.

ADOPTED AND APPROVED by the Board of Directors of the Cascade Water Alliance at a special meeting thereof, held on the 22nd day of January 2025.

Item 10a January 22, 2025

EXECUTIVE COMMITTEE

Penny Sweet, Chair, City of Kirkland Angela Birney, Vice Chair, City of Redmond Mary Lou Pauly, Secretary/Treasurer, City of Issaquah

Meeting Recap Tuesday, January 7, 2025 2:00 PM – 2:30 PM Held via Zoom

Discussion Items.

A. Water Supply Contract Negotiations – Next Steps with Seattle. This item is for the Executive Committee to prepare for its meeting with Seattle Mayor Harrell.

Recap: The committee discussed the plan to meet with Mayor Harrell on January 31. The committee expressed its interest in continuing to explore regional collaboration opportunities with Seattle and directed CEO Ray Hoffman to prepare background materials for them to review. The committee asked to meet again with the CEO before the January 31 meeting with Mayor Harrell.

Item 10b January 22, 2025

FINANCE & MANAGEMENT COMMITTEE

Mary Lou Pauly, Chair, City of Issaquah Penny Sweet, City of Kirkland Dave Hamilton, City of Bellevue John Stokes, City of Bellevue

Meeting Agenda RECAP Tuesday, January 14, 2025 1:30 PM – 2:30 PM Held at Cascade's office and via Zoom

Call to Order

- 1. Chair Comments.
- 2. Executive Session.
- 3. Items Recommended for Action at the January 22, 2025 Board Meeting
- 4. Discussion Items
 - A. Wholesale Contracts Update. Staff will update the committee on the status of the draft supply contracts with Tacoma, the questions received from Members about the Tacoma contracts, and the upcoming meeting between the Executive Committee and Seattle's Mayor.

Recap: Staff reviewed the Executive Summary presentation with the committee, provided an overview of questions received from Member staff, and addressed committee questions. Staff also brought the committee up to date regarding upcoming meetings with Seattle.

5. Other Issues.

6. Next Meeting Date and Location.

The next meeting will be held Tuesday, February 18, 2025, 1:30 p.m. – 3:00 p.m. at Cascade's office and via Zoom.

Please Note: Zoom instructions are in the meeting invite and the email with the agenda and attachments.

Item 10c January 22, 2025

PUBLIC AFFAIRS COMMITTEE

Angela Birney, Chair, City of Redmond Penny Sweet, City of Kirkland John Stokes, City of Bellevue Ryika Hooshangi, Sammamish Plateau Water Russell Joe, City of Issaquah Dennis Martinez, City of Tukwila

Meeting Agenda RECAP Wednesday, January 8, 2025 9:00 AM – 10:00 AM Held at Cascade's Office and via Zoom

- 1. Chair Comments.
- 2. Executive Session.
- 3. Items Recommended for Action at the January 22, 2025 Board Meeting.
 - **A. 2025 Omnibus Sponsorship Proposal**. A list of proposed sponsorships for 2025 are presented for committee review in one omnibus package. Staff recommends support for the \$47,000 proposal.

Recap: The committee supported the sponsorship proposal and recommended the item be placed on the Board's consent agenda for January 22.

- 4. Discussion Items.
 - **A. State Legislative Update.** Staff will provide an update on state legislative activities and the upcoming session. The 2025 regular session begins on January 13 and is expected to last 105 days, ending on April 27, 2025.

Recap: Diana Carlen, Gordon Thomas Honeywell, updated the committee on the upcoming legislative session, the state budget deficit, changes in the House and Senate due to the election, and appointments in Governor Ferguson's administration. The state session begins on January 13, 2025, and staff will update the committee about policy bills and budget issues at future committee meetings.

B. Federal Update. Van Ness Feldman's government relations team in Washington, D.C. will join the committee meeting and provide an update on the federal topics of interest to Cascade.

Recap: Sean Taylor, Van Ness Feldman, updated the committee on a variety of federal topics. The briefing included a recap of 2024, election results and leadership changes in the House and Senate, and the likely Congressional agenda for 2025. Finally, Mr. Taylor reviewed water grant and loan opportunities for Cascade and its members.

5. Other Issues.

A. 2025 Communications and Outreach Plan. Attached is Cascade's 2025 Communications and Outreach plan. The plan includes communications efforts Cascade will undertake in 2025 based on member and staff input. No action is required by the committee, but feedback can be provided to staff at any time.

Recap: Staff provided a copy of the plan in the packet and noted that feedback is always welcome on communications and outreach activities throughout the year.

B. Wholesale Contracts Update. Staff will briefly update the committee on the status of the negotiations and contracts with Tacoma Water.

Recap: Staff gave a brief update on the Tacoma contract negotiations. A summary version of the Mini Deep Dive workshop presentation was sent out to all Board Members, Alternates, and staff. Board consideration of the Tacoma contract authorization is scheduled for January 22, 2025. The Seattle Mayor and Cascade's Executive Committee will be meeting on January 31, 2025. In the meantime, Cascade staff and SPU staff will be meeting to explore the possibility of Cascade purchasing additional residual water from SPU.

6. Next Meeting Date and Location.

The next meeting will be Wednesday, February 5, 2025, 9:00 a.m. – 10:00 a.m. at Cascade's office and via Zoom.

Please Note: Zoom instructions are in the meeting invite and the email with the agenda and attachments.

Item 10d January 22, 2025

RESOURCE MANAGEMENT COMMITTEE

Lloyd Warren, Chair, Sammamish Plateau Water Jon Ault, Skyway Water & Sewer District Dave Hamilton, City of Bellevue Tom McLeod, City of Tukwila John Stokes, City of Bellevue Jon Pascal, City of Kirkland Ryika Hooshangi, Sammamish Plateau Water Angie Nuevacamina, City of Redmond

Meeting Agenda RECAP Thursday, January 9, 2025 2:00 PM – 3:30 PM Held at Cascade's office and via Zoom

- 1. Chair Comments.
- 2. Executive Session.
- 3. Discussion Items.
 - A. Phase 3 Update. Staff will update the committee on the Corps of Engineers Phase 3 Project.

Recap: Staff provided an update to the committee that the Phase 3 project is about four to five weeks behind schedule due to contractor difficulties with its cofferdam, differing site conditions, and change orders. The spring reservoir refill is scheduled to begin in March instead of on February 15, 2025. The positive news is the mountain snowpack that directly impacts the amount of flow in the White River and the ability to refill is above normal. The project cost is still tracking within the Board-approved amount from 2018.

B. On-call Electrical Engineering Contract. Staff will update the committee on a proposed change of approach to on-call electrical engineering services. The proposed change would expand the scope of services to include integration (construction). Staff will also discuss the potential benefits of selecting more than one firm resulting in more than one on-call contract for 2025-2028.

Recap: Staff provided a brief presentation requesting feedback from the committee to modify the historical approach for procuring Electrical and Controls On-call Engineering Services. The modified approach would allow staff to issue a request for qualifications (RFQ) for a three-year contract, select more than one firm, and would modify the scope of services to include integration / field support. Staff anticipates presenting a request to authorize the CEO to enter into a contract with one or more professional services firms for the Electrical On-call at the March 26 Board meeting.

C. WSDOT Lewis Creek Culvert Project. Staff will provide an update on the status of contract negotiations with WSDOT.

Recap: Staff informed the committee that Cascade's CEO and the Washington State Department of Transportation's (WSDOT) Regional Administrator met to discuss the Lewis Creek Culvert Crossing – BIP relocation project due to stalled contract negotiations. As a result of the meeting, Cascade will host a meeting at Cascade's offices in the next two to three weeks. Attendees will include the state's Regional Administrator, the state's construction management team, the state's design build contractor (Atkinson Construction), and Cascade staff and consultant support as needed.

D. Wholesale Contracts Update. Staff will update the committee on the current status of the contracts with Tacoma Water, discussions with SPU, and the water quality blending study.

Recap: Staff informed the committee that Cascade and Tacoma continue to make good progress on the draft contracts for the two new supply contracts. The final drafts will be included in the Board packet along with a resolution to authorize the CEO to finalize and execute the contracts. Staff also informed the committee that Ray Hoffman met with the Executive Committee in preparation for the Executive Committee's meeting with Mayor Harrell on January 31 to discuss regional collaboration. Ray will meet with the Executive Committee again prior to their meeting with Mayor Harrell.

4. Items Recommended for Action at the January 22, 2025 Board Meeting.

A. Integrated Aquatic Vegetation Management Plan (IAVMP). The final IAVMP will be presented to the committee prior to requesting approval of the IAVMP at the January Board meeting. The purpose of the IAVMP is to provide long-term adaptive management strategies for aquatic plants that are cost effective, ecologically sustainable, and maintain the Lake Tapps Reservoir's water quality, with a focus on water quality for future drinking water supply. The plan includes two recommendations which were evaluated using the Board-approved *Drinking Water Quality Policy Framework*: 1) continued chemical treatment of milfoil, and 2) regular reservoir-wide surveys to monitor other non-native and native nuisance plants. The plan does not include treatment of any plants other than milfoil, and staff would return to the Board for direction if a future reservoir survey indicated a need for treatment of additional plants. A determination of non-significance for SEPA and a public comment period have been conducted. The IAVMP Executive Summary is attached, and the full plan can be found here: IAVMP Final Draft

Recap: The committee supported the recommendation that the item be placed on the January 22 Board agenda as an action Item.

USACE Five-Year Temporary Construction Easement #2. Motion to adopt Resolution 2025-02 authorizing the Chief Executive Officer, in consultation with legal counsel to finalize and execute a five-year temporary construction easement to be granted by Cascade Water Alliance to the U.S. Army Corps of Engineers, related to the Corps' Mud Mountain Dam Fish Passage Project, substantially in the form attached. (Attachments)

Recap: The committee supported the recommendation that the item be placed on the Board's consent agenda for January 22.

5. Other issues.

6. Next Meeting Date and Location.

The next meeting will be Thursday, February 13, 2024, 2:00 p.m. – 3:30 p.m. at Cascade's office and via Zoom.

Please Note: Zoom instructions are in the meeting invite and the email with the agenda and attachments.
